THE HAWAIIAN STAR.

CHINESE VOTERS OUT S.M. DAMON BUYS A NEWSPAPER

By instrument just filed with Secretary Thomas, the Bulletin Publishing Company assigns its type, printing and publishing apparatus to S. M. Damon.

The Bulletin now stands as an independent newspaper, and it is expected to appear in the usual manner next week.

By its purchase of the Bulletin, Damon adds another newspaper to his already large list. He is now the owner of the Honolulu Star, the Daily Republican, the Morning Bulletin, and the Evening Bulletin.

The Bulletin, which has been in operation for a year, was not a success. It was founded by J. N. Asberry, who also is the proprietor of the Star.

The sale of the Bulletin was announced last week.

THE SYSTEM ALMOST DEFIED DETECTION

The tax office mentioned in the Bulletin of June 19th, in which it was alleged that there had been a failure to collect taxes, is the subject of an investigation by the Board of Commissioners of Lands.

The investigation follows the revelation by the Bulletin that the tax office had been defrauded by the failure to collect taxes.

The Board of Commissioners of Lands has been urged to take immediate action to prevent the recurrence of such failures.

The Bulletin has published several articles on the subject, and has called attention to the need for better supervision of the tax office.

The Board of Commissioners of Lands has asked for the resignation of the tax officer, who is alleged to have been defrauded.

KILAUEA HAS BROKEN OUT

Kilauea has broken out again, according to the report of the U.S. Geological Survey.

The eruption is said to have been very severe, and has caused considerable damage to the附近地区。There is no immediate danger to life or property, but the residents are advised to take precautions.

The U.S. Geological Survey has been making constant observations of Kilauea, and its report is based on these observations.

The eruption is said to have been caused by a fault in the earth's crust, and has been preceded by unusual seismic activity.

The Bulletin will publish a full report on the eruption in its next issue.

The Fourth Meeting

The Fourth Meeting of the Board of Commissioners of Lands was held yesterday, and was attended by a large number of residents.

The meeting was called to consider the report of the Board of Commissioners of Lands on the matter of land grants.

The Board of Commissioners of Lands has been asked to report on the matter of land grants, and has been urged to make a report on the subject as soon as possible.

The meeting was adjourned until tomorrow, when the Board of Commissioners of Lands will continue its deliberations.

THE WEATHER

The weather in Honolulu today was very pleasant, and the air was clear and fresh.

It is expected to remain sunny and pleasant throughout the week.

The temperature today was 82 degrees Fahrenheit, and the humidity was 75 per cent.

The weather in the Islands is expected to remain pleasant until the end of the month.

The Bulletin will publish a full report on the weather in the Islands in its next issue.

Incumbent on the Bulletin staff.

FRUITS AND VEGETABLES

The Bulletin has published a list of the fruits and vegetables that are now in season, and has suggested that they be purchased at the market.

The list includes:

- Apples
- Bananas
- Carrots
- Celery
- Cabbage
- Potatoes
- Tomatoes
- Oranges
- Limes

The Bulletin has urged residents to purchase local produce, and has suggested that they support local farmers.

The Bulletin will publish a full list of the fruits and vegetables in season in its next issue.

A TERRIBLE PEST.

To solve the mystery or finding the root cause of the problem, we must first examine the type of insect that is causing the damage. The most likely candidate is a termite. Termites are known to cause significant damage to wooden structures, including homes, fences, and other wooden objects.

Once we have identified the termite as the cause, the next step is to control the population. There are several methods available for termite control, including bait systems, fumigation, and chemical treatments.

A bait system involves placing baits that are attractive to termites near the affected area. The termites will consume the bait, which contains a pesticide, and then return to the nest, spreading the pesticide to other termites.

Fumigation involves injecting a pesticide into the soil around the affected area. This method is effective but can be dangerous if not done properly, as it can release toxic gases into the air.

Chemical treatments involve spraying the affected area with a pesticide. This method is effective but can be costly and time-consuming.

In conclusion, the problem in the wooden fence is likely caused by termites, which can be controlled using a bait system or chemical treatment. It is important to act quickly to prevent further damage and to ensure the longevity of the fence.
