PREFACE

The Division of Water and Land Development of the State of Hawaii Department of Land and Natural Resources generates information on Hawaii's water resources and serves as the repository for basic hydrologic and geologic data.

The publications listed herein include those published under several former agencies which were eventually succeeded by the Division. These agencies were the Hawaii Division of Hydrography, the Hawaii Irrigation Authority, and the Hawaii Water Authority.

In consolidating its own publications with those issued by the above former agencies, the Division of Water and Land Development has assigned new publication numbers in the following categories: Bulletins, Reports, Circulars, and Flood Plain Maps.

Bulletins refer to publications whose subject matter is general and comprehensive; for example, islandwide or statewide in scope.

Reports refer to publications whose subject matter is specific and limited; for example, project study, research paper, or basic data compilation.

Circulars refer to those publications whose subject matter is preliminary, introductory, or brief.

Flood Plain Maps refer to folded, single-sheet maps which show the flood hazard and flood hazard information for specific areas.

Administrative Rules are reprints of Rules promulgated by the Board of Land and Natural Resources for those programs assigned by statutes to the Division of Water and Land Development.

Hawaii Division of Hydrography Bulletins, originally numbered 1 through 13, have been revised in this list by including the prefix letter "B".

Generally, Division publications are published and disseminated to service local needs, and publication runs are limited. Many of the publications are out of print, but may be consulted in the office of the Division and at many of the public libraries in the State.

Available publications may be obtained free of charge from the Division of Water and Land Development, Department of Land and Natural Resources, State of Hawaii.
