whelming force against them. The French show that they were very much in a minor try however it may be the collision took place. Meantime the diplomatists had not been alle and the difficulty which was being longht out in the marshes of Tonquin was being quicely discussed in the official draw-ing rooms of Paris and London. Through Marcuis Theory a convection was signed. ing them is addreaded of the other being quitedy discussed in the others draw-ing rooms of Paris and London. Through Margues Tseng a convection was signed. I Li Hung Chang being a party to it. This convention was perfectly satisfactory to France, but it has been broken. Hence the claim for indemnity. Much of the insociation is very obscure to the public even of France, and it will probably be twenty years if not more, before the true inwardiness of the affair becomes public progetty. One thing however, is very patent and that is, that whatever the domands of France may be they will have to be han-dated France demanded \$15,000,000 the other day. She has now destroyed gov-ernmen property at. Foo-chow ansemiting to about that figure. China will have to pay not only the original bill, but also the cost of destiructore, and size cannot long affard to allow the account to run up at of Fig

are gin

2 the property

cost of destructive, and size cannot long affard to allow the account to run up at-such a minimum rate. The French army has been to Fekin before, and it may be said to know the way, the summer palace opisods of Oct. 6th, 1860, may be played again in 1884 or 1867. One lesson may be learned from the suc-cess of the French and that is, that no

create of how Presents and these is an inter-monant of western knowledge can make the eastern man the equal of his western brother when it comes to hard knowls. In diplomary he is more than a match, in lying he is distinctly his superior, but when it comes to reliferate matter, the when it comes to military matters, the western man, no matter of what nation when it is a superior to what interest shifty is not only his superior. For this day that Alexander next the Asiatic forces at Arbein and with only 47,000 Greeks routed 1.040, (00) Asiatics: from the many conflicts of Englishmen in Hindustan, from the recent alexandre to be a superior of the superior of the super-distance of the superior of the superior of the super-distance of the superior of the superior of the super-distance of the superior of the superefforts of Russia against the very chivalry of Asia, the same lesson must be learned. on dool, the same rescontinue to contract, the western man is supported and neither arms of precision, nor cultivation nor any thing short of a most radical change in character will raise the lower rate. The fear of their dominating the world a fa-

four of their dominating the world, a fa-vortie thome a year ago, is a vain chimers. But there is another asyect of the France-Chimese struggle, which is very serious. That is the trade question. France-on proying upon Chimese commerce injures-not alone. Chima, but all Europe and the United States. This will lead to grave complexitions should the struggle be con-tinued to any length of time. Every mail now will be watched with intense interest, to see the many possible developments of this wat. the present . From the NOTES. or have mod this local best that the

An arbeian bare into a stru-tim of water started from a little rise may ent rapidly expands it, and it even b hwagh the mobile have with an expl allow of a liberal outflow, whilst a spring shrated many feet below but proceeding tor some of it through the ing which in falling forms a one of ginesy

that if we could from above the surface of wer a spring balance v a ten pound weight on it, at just the ve locity which a falling body acquires, the locity which a falling body acquires the index would show at zero; in other words we relieve the spring of the weight. A rapidly moving lava stream has all the features canggersted which exhibit them selves in a river. It would be difficult to do justice in a short notice, is all the different locies in a

It would be difficult to do justice in a short notice, to all the different interest-ing points connected with Hawaiian vol-cances to be found in Capi. Duiton's re-port on them. I have endeavered more particularly to call attention to a few of the problems which seem to admit of other solutions than these there presented, as well as to extend to volcances generally, Capi. Duiton's view which I have long advecated that the surface of the lava in the Kihawa and Manua Lea conduits, appear as equilibrium levels depending upon their mean density at any given time, and so as to be applicable to the gen-eral hypothesis of volcance action, assimand hypothesis of volcanic action, assuming a thin crust of the earth and a moltest abstratum. If this loss density of the upper layer when at least

is molton antistratum when at least xpands into a fissure in the crust be fairly inferred as probable, we this have a ready means of accounting or the different phases of volcanic action

for the different phases of volcanic action whether hydrostatic or explosive, in an ciont as well as in modern periods, espe-cially when we consider them in connec-tion with Elie de Beaumont's important principle of the constant struggle between the delormation of the sphercoil by internal loss of heat, and the tendency of the earth's solution to maintain that sphercoidal figure more nearly exact. Accidentally occluded water or steam, which seems to be so common in European

Accidentially occluded water or steam, which seems to be so common in European volcances, might them. If the proper position is a supplementary or parasitic phase of volcanic action, while an intelligible cause would present itself for the behavior of certain active volca nees, not Hawaiian alone, but such as Charles Darwin refers to in his account of those in the Chilean Cordillors, similard far apart from each other, and built up "in great snow-claft cones," far above the earth's mean surface, and the lavas in rth's mean surface; and the lavas in which simultaneously appearing during the great regional earthquake of 1835, he describes as reminding him of "water

the great regional earthquake of 1835, he describes as reminding him of "water splashing up through holes in the ice of a from pool when a person stamps on the surface." Captain Dotton refers in the concluding paragraph of the characteristic of volcanic Problem to "one characteristic of volcanic inction, which is quite universal," that is, "the intermittent feature of eruptions," by which, "volcances do not discharge all their available product at once, but by re-ponted spasme of activity, separated by intervals of repose," the cause of which he seeks in some unknown "elastic force," ceks in some unknown "elastic force, seeks in some unknown "ended force, which gradnally develops and is then dis-charged. "The agency," he says, "which time progressively develops the potential energy or elastic force, is the missing fac-tor. When we discover it we shall discover the secret of the volcano." As far as the eruptions of Hawaiian volcances are accounted between Carterio Dathen secret ed however, Captain Dutton seems sufficiently explained their inter action in the second paragraph in the crate of Kolanse. On ing up the apparatus again, when the uncoded to be out to be a set of the set of t the center, I saw it afterwards full into the sea at the coast. I have watched, in the layers in the lakes of Kilanon, in the formain of 1870 in the summit cra-ano discussion of have atreased the layer at another of the summit cratimes, however, being discharged at the summit instead of the sides, when the lat-ter are strong enough to resist the hydro-shift pressure. The "missing factor" therefore an area and the strong factor and the strong strong strong strong strong factor. to reversal of the relative densities in solid and mellan states, there is no diff. from the probability of a solid reads maked the formation of a solid reads maked in spectrally while it suggests in the bar rocks must failure and dee-miny effect for a horse there is no op-miny offset for methods in the law was evaporating from which the law was evaporating for most in the formation of the formation of the law was evaporating the most of a solid reads in the law was evaporating form which the law was evaporating form which the law was evaporating for most on the reads in the law was evaporating for most on the reads in the law was evaporating for most on the read of the law was evaporating for most on the read of the law was evaporating for most on the law was evaporating for most on the law was evaporating for most on the law was evaporating formation on the law was evaporating formation on the law was evaporating formation on the law was evaporating for most on the law was evaporating for most on the law was evaporating formation on the law was evaporating for most on the law was evaporating formation on the law was evaporating formation on the read of the law was evaporating formation on the law was evaporating formation on the law was evaporating the most on the law was evaporating formation back the law was evaporating formation on the law was evaporating formation back the law was evaporating formation on the law was evaporated on the law was evaporated by th of the spheroid -a process which we in the Pacific Ocean see in action all around us in the slow subschemes of its bed, not withstanding the local upheaval of active of I have never happened to wrinstanding the local influence of score volcanic areas—may perhaps in dicate one means at least, by which the molten sub-stratame may be gradually pressed up through fissures in the crust, while the normal level of the liquid upper layer when expanded into such fissure, and leav ing the heavier components below, may be many thousand feet above the mean sur-face of the astrike error owing to fit least seliavisy of our lavas, for which steam is ally brought forward as the origin, pt. Dutton seems inclined to follow all interpretation. I mean the hol-counds of polycies, which some face of the earth's crust, owing density. However this may be, Hawailar volcanoes, in the grander phenome well as in the details of their action. "The numberless mounds or bosses of

EST MODUS IN BREUS. WEDNESDAY, SEPTEMBER 10, 1884.

THE Advertiser has an abusive article

The Advertiser has an abusive article upon the Rev. E. G. Bockwith. That of course is not surprising, for the Govern-ment Organ is always traducing the good and honorable. Mr. Beckwith may con-sider himself fortunate that he is blamed and not praised by the "organ." One remark of the *Advertise* needs refn-tation, and that is with regard to "the streets of this city being remarkably free from druthken men." Let any one go along Nunanu street at night. Let any one go through Palama of a Sunday and he will see for himself how atterly untrue

one go surough ranna of a Sinday and he will see for himself how utterly untrue the P. C. A statement is. To those of us who have known the islands for the last fifteen or twenty years past, the fact is patent that drunkenness is very much on the increase.

tion," the government organ devotes two thirds of a column to an attempt to arouse

Church. That this is a government "card" we have long known, the thin end of the wedge appeared in some of the speeches of the Minister of Foreign Affairs in the

or omission on the part of the Indepen dents. They have acted as they have be cause it was in furtherance of their indi vidual profit and wishes.

The struggle between France and China

ested, but the Great Republic is also, and another factor enters into the problem, whose action cannot be so clearly foretold. depending as it does on the turn of a pop

ular election. The present difficulty of France with China dates back to 1859. At that date the Chinese were defeated, and the colony of Saigon was founded. From this as a point d'appui French intrigues have spread as a net work over the devoted country.

UNDER the heading "About Immigra-

a religious hostility between the Roman Catholics and the members of Fort street

in one, met with his death at the hands of the Annamese. This called forth the en-ergies of France and war was carried on in a more vigorous manner: China as Sou-zerain of the Province found her honor Legislature, but the bald statement of it was reserved for the after session campaign: and it was only the other day that mixed up in the affair, and massed troops

on the frontier. With French success came French demands, and a material body informed us that the attempt was being made, but that it would be a failure as the Roman Catholic Church was not cuarantee was exacted. In advancing into the interor, the French approached the border and at Bacninh, and further north, encountered Chinese troops. The ac-count of the struggle is various. The Chigoing to be used as a card in the hand of

a sharper. No antagonism, such as the P. C. J. shadows forth, exists between the two religious bodies referred to. Each does its own pe-culiar work and does it well. That in both bodies there may be a few narrow minds, is doubtless true, but that the mass finite, is denotees true, but that the mass of the people composing them is animated by any familie spirit, or that "Fort street Church has the same affection for Roman Catholics that Satan is supposed to enter-tain for Holy water," as the Advertiser charges, is a base slander. It is the power the number of Fort

It is by no means the members of Fort street Church only who are desirous of getting Japanese Immigrants; if the planters were polled it would be found

the claim for indemnity. Much of the negotiation is very obscure to the public that men of many varieties of creed are anxious for them, and their object is the same, economy. On the other hand we know of several gentlemen connected with even of France, and it will probably be twenty years if not more, before the true

inwardness of the affair becomes public property. One thing however, is very patent and that is, that whatever the demands of Fort street Church, whose plantations are in such a position that Portuguese labor suits them. We know that they are glad that their laborers should have the minis-trations of a priest of their religion and that does have the ministrations of a priest of their religion. France may be, they will have to be liqui-dated. France demanded \$15,000,000 the other day. She has now destroyed govthat they have given their money towards the erection of suitable places of worship. Those who know Wailuku, know how ernmen property at Foo-chow amounting highly esteemed Father Leonore was by men of all creeds. Father Sylvester on Kanai, had the respect of all shades of afford to allow the amount long

religious opinion. The charge of the government organ is

most unjust. It is hardly worth noticing, because a charge so baseless must neces-sarily fall to the ground, but still a pro-test against such unfarmess ought to be made, and we make it the more readily as we are in no way connected with the reli

gions body that has been maligned. Drane the past years, when the prices of sugar have been good our planters have been quite satisfied with the yield they have obtained from their cane, and there was no necessity for socking fresh meth-

ods of obtaining juice from cane. But now the case is different, the price obtained for sugar is extremely low and it is doubtful whether it will ever return to the figures of former years. The problem now is, either to raise a ton of sugar at a

now is, either to raise a ton of sugar at a considerably less expense than formerly, of to extract more juice from a ton of cane than has previously been obtained. On economy of raising cane the minds of our planters have been long set, and tom many plantations expenses are put as low as possible. The first part of the problem then has been met, but the soln. But there is another aspect of the problem then has been met, but the solu-tion is not entirely satisfactory, with no Franco-Chinese struggle, which is very Then comes the second part of the prob-Then the second part of the prob-Then comes the second part of the prob-tern. To this the second part of the prob-tern.

have done thus and so, because of any act

resents some grave points. Whenever a European power goes into an extensive war with an Eastern one, such is the com-plication of interests that the most promi-

ent States cannot afford to see their sister lose, and are terribly jealous if she wins. This is the present status of affairs, with the addition that not only is Europe inter-

<text><text><text><text><text><text><text><text> and have caught the petty chieftains the Peninsula in their meshes. For full twenty years this has been at work and then suddenly affairs were precipitated. Actual fighting broke out, and Riviere, one of the most gallant and most polished men in Paris, soldier, scientist and author

Losnow, August 23rd.—A Times' dispatch from Foo Chow dated 7 o'clock this morning arys: At 9 o'clock last night Admiral Courbet officially an-nounced that he had received orders from Paris to make reprisals. The British Vice-Consul left last night and reached English gunbosts at midnight. A dispatch from Shanghai, dated this morning, says: Admiral Courbet has announced his inten-tion to bombard the arsenal at Foo Chow to-day. The French Consul at this city has lowered his flar. count of the struggle is various. The Chi-nese claim that the French had an over whelming force against them. The French how that they were very much in a minor ty-however it may be the collision took Meantime the diplomatists had not been dle and the difficulty which was being ought out in the marshes of Tonquin was

being quietly discussed in the official draw ing rooms of Paris and London. Through Marquis Tseng a convocation was signed Li Hung Chang being a party to it. Thi

convention was perfectly satisfactory to France, but it has been broken. Hence

The French army has been to Pekin before, and it may be said to know the way; the summer palace episode of Oct. 6th, 1860, may be played again in 1884 or 1885 One lesson may be learned from the suc-cess of the French, and that is, that no amount of western knowledge can make the castern man the equal of his western brother when it comes to hard knocks. In diplomacy he is more than a match, in lying he is distinctly his superior, but when it comes to military matters, the western man, no matter of what nation-ality is not only his superior, but immeas-erably his superior. From the day that Alexander met the Asiatic forces at Arbela immediately, but with only partial success. Elevant reseals formed the Chinese fleet-mostly light river and coast transports-and were really toys, the Volta, Dugay, Tourville, Delaining, Aspe, Yipere, Lynx and Villars. Several Chinese gun-boats maintained bravely a desultory fire for about a quarter of an hour, when the survivors or their ally finished in seven minutes. The superior rerews leaped overboard. The combat was practic-ally finished in seven minutes. The superior relation of the Chinese fleet could be con-tracted? We know of hut one plantation on the siand of Maui where the sugar arerapses 220 pounds to the ton of came. There should be con-tracted? We know of hut one plantation on the siand of the chinese vessels, no fight, but a massaere. This is the opinion of every spectator. Two eight well, one sinking near the English man-of-war Chan-pion, while one statomed the contex heart massaere. This is the opinion of every spectator. Two eight well, one sinking near the English man-of-war Chan-presidatine from the batteries ceased about 3 P. M. Some French and Chinese schips were engaged in elose provinity to the English men-of-war Vigil-ant and Champion. THE FRENCH YLENT. and with only 47,000 Greeks routed 1,040, 000 Asiatics; from the many conflicts of Englishmen in Hindostan, from the recent efforts of Russia against the very chivalry of Asia, the same lesson must be learned, Some French and Chinese ships were engaged in those proximity to the English men-of-war Vigil-ant and Champion. The falls inter a french and times of low prices, the first The following is a list of the French vessels and other amment in the China squadron: The Ba-tard, the flagalip of the signadron: The Ba-tard, the flagalip of the signadron is a space of the sis a space of the sis a spa

news from home and alread and other miscellan-cous matter. Its overlass by the steamer Movjews from San Francisco, we rescived the September number of the *therisand* Monthly. The contents of the number before us are of a nature to warrant the praise awarded to the editors for the care evinced to supply mental pabulum acceptable to all classes of readers. The first article, relative to a "Nine Days Travel in Metrico" brings the reader again in contact with an old and valued contributor, Mrs. Loniss Palmer Heaven, whose acquaintance with life in the *baciends on* at the cattle station is pleasantly related. The continued story of "The Campaign at Widdleton" which has ably saturzed the part-isanship ro noticable in politics, concet to a close. A victim to quarantine rule gives an amnsing re-ation of the traits and trobles during a brea-days stay at Marseilles. Miss Harriet Stevens ad-vances a novel. If not profound theory on the sub-ject of "The Pyramids," at which the learned pro-tessor, Finzzi Smith cannot but feel abashed. "Young Strong of the Clarico," by Milient Wash-burne Shinn, is in a different strain from "A Prac-tical Consideration of the Mormon Question," by William Beatty, but both writers evince familiarity with their subjects and the differences may be stally or do by readers. The September number of the "Overland" as a whole is not at improve-ment on the province number, but it is well fitted to command favorable attention from the reading public. STMR. KILAUEA HOU. **STEAMER "MOKOLII.**

nswer, but there seems to be a probably disfactory solution in the substitution of which there seems no doubt but that the yield from the cane is increased from 15 to 20 per cent: in fact that every atom of saccharine matter is soaked out of the cane. But on the other hand, water is re-

cance. But on the other hand, water is re-quired in this process, which is not at pres-ent used, and the trash when it is thrown out of the cylinder comes forth sodden. It would have to be passed through a mill to squeeze out the water. Moreover, being destitute of all saccharine matter it would not make as good fuel as it does now. The consideration of mathematical solutions.

The consideration of water supply and leterioration of fuel must enter consider ably into the calculation. But it is impos-sible to determine how much of the value sible to determine how much of the value of the increased product of juice, will be absorbed by the increased cost of fuel. This can only be fully tested by experi-ment here. Some people say wait till we see the results of the experiments in Java. That will be a matter of probably eighteen months or two years. We should then have to begin our own experiments. It seems to us that it would be wise to com-mence at once. The writer in Java who advocates the diffusion experiments speaks as follows:

as follows:

"In a matter of so r he co-operation of all who are concerned in the fave sugar industry is barily to be doubled." "Nobody would surely incur the reproach of hicking. for an university operation of the

r experiment ab in the struggle of cos ern footing, however obstinutely the buttle i

His advice seems thoroughly apt for the Hawaiian Islands.

A rayourre argument with the Cabinet

rures. If, says the Ministerial organ the Independents had only gone to work in a different way, and had caludy and temper-ately shown wherein the government was at fault, they had fair material to work upon, and would have succeeded in carry-ing their measures in the Legislature. This argument is founded upon a falla-cy. The fallacy consists in the assumption that certain members of the Legislature who voted in support of the Cabinet, were amenable to reason, and would have voted a

who voted in support of the Cabinet, were amenable to reason, and would have voted with the Independent party, had the facts which were presented been presented in a different way. Such however, was not the case. Look at the list of names who sup-ported the Cabinet: Macfarlane, Walker, Kaulukou, Aholo, Kaunamano, Kamakele, Gardner, Palohan, Keau, Lilikalani, Ba-ker and all the rest. Is there any same man who can point out any one man mome

man who can point out any one man among the Cabinet supporters who would have changed his vote upon any argument, or changed his vote upon any argument, or upon any different method of presentation of facts from that which was pursued. If not, the argument falls to the ground, for if a majority were supporting the Cabinet from interested motives, they would con-tinue to support it irrespective of any showing made to the contrary. And this was precisely the situation. Of the mem-bers of the Legislature, one-half were office-holders whose retention in office and

office-holders whose retention in office and appointment to new offices depended upon their giving an undivided support to the Cabinet. These, in addition to the individ nal votes of the Ministers, gave them the majority. With the experience of the past

Argument and reason had no more control Argument and reason had no more control over the votes of those men than the gen-ealogical report has over the price of sugar. Likewise as to the retention of the Cabi-net in offise and the argument that the reason they are not ousted is because of the wrong methods of opposing them which have been adopted. This is based upon the assumption that the Kim ris open to conviction, if sufficient facts we are only placed before him. Facts have been placed before him which no man can izro re with-

placed before him. Facts have beent placed before him which no man can igno re with-out stuftifying his intelligence or 1 is hon-esty, and no action has been taker t. The simple fact is that the King is not open to conviction. He wishes to retain the pres-ent Cabinet because they are willing to be subservient to his wishes. Under such circumstances it is simply ridic abous to may that the King and the Leg sistature

complications should the struggle be con tinued to any length of time. Every mail now will be watched with intense interest, the Diffusion Process over the present method of crushing the cane. From the statements of those who have used this

the expenses. The Nonticel Gazette says that Seidlitz powders and blue pills are now considered requisite in the outfill of occan royagers, bromide of solium hav-ing been almost discarded as a remedy for seasick-ness. The rich foods, nuts and pastry of a steam-ship's bill of fare are tempting to the sharpened appetite of the voyager, they over-eat, and the pitching of the vessel completes the round. But it is asserted that Neptune can be cheated of his tribute if the intending occan passenger will begin to fortify himself or herself a week in advance with a five grain blue pill every other night alter-mating with seidlitz powders.

BRADSTREET's, by recent figures, shows that consumption of liquor in the United States far outstripped the growth of population, number of gallons of liquor consumed yearly increased as follows: 1840, 71,000,000; 1850, 450, 003; 1860, 202,000,000; 1870, 223,000,000; 1880, 5 000,000; 1833, 655,000,000; While the popula-ias only tubled in the last forty years, the as only trobled in the last forty w amption of liquor is nearly ten times greater th 1 was in 1840, and the amount of money expend in its purchase shows a still greater increase. Th aunual expenditure for liquor now exceeds \$80 900,000.

WE hear that the Mother Superior of the ords

A rayournet algoment with the Cabinet sympathiser is, the reason that the Inde-pendent party has failed in the Legish-ture and has not onsted the Cabinet, is be cause it has attacked men and not meas-mes. If, says the Ministerial organ the

been expressed among her friends upon the subject. Any trustworthy person could of course do the work. To arry its support to home industries is certainly the duty of a government: but of late this rule has not obtained, among the members of the flawing chained. Much blacksmith work which wight be cally done here, as cheaply and quite as well be cally done here, as cheaply and quite as well as abroad, has been ordered in San Francisco. We only give this as a case in point, later we shall further elaborate upon the matter. There are other things ordered from the scoast which might be other in the course of the only reason they can assign for this action of the government is that it is convenient to keep certain spont the brait and by iberal commission they can assign for this action of the government is that it is convenient to keep certain sponts they can assign for this action of the government is the frequent appointment of foreigners in place of *Kemminan* to positions of trust, in many cases Hawafian horn assiring for the positions, but may been equally suitable for the positions, but may been equally suitable for the position, but not be around at foo Chow. It is stated that in four the increase distribution of the govern minutes the context was practically ended. Seven Chinese represent as point as in mon. The Chinese replay from the donk-yard battery when the bomodratene to commend. But thur was all, they, however, looted the residences of the forsigners are asserted Kraupp gue monnted. If the realized, Foo Chow should have furnised some walking of the avakening. The fight was conducted behind for the avakening. The fight was conducted behind for the avakening. The fight was conducted behind for the avakening.

poars. The conditions were favorable for the dis-play of the new war spirit, if it is cristed. But the French hallstorm of shot and shell was too much for them. It is not difficult to imagine what would have happened it the Chinese had been de-ployed in the open field. The heaviest makes would not hold their ground long after the first discharge of artillery, and their roti could not well be prevented from turning into a massere. four months, it is simply absurd to say that any of these men voted as they did because of the manner in which facts dis crediting the Ministry were presented. Mas. BLAINE is a finely educated woman, was a school mintreas in Kentucky when Blain met her. He had just graduated and went to insky to commence life as a school tascher.

met her. He had just graduated and went to Ken-theky to commence life as a school teacher. His school was very maar that of his wife's, and a warm friendship ensued. Blaine fell in love with her and when school broke up and the lady returned to her home in Maine, Blaine followed her and eventeally married her. Mrs Blaine is said to be very do-mestic, and is tall and dignified. Her constant associate and friend and comin is Abigail Dodge, better known as Gail Hamilton. Unlike Mrs. Blaine, Mrs. Logan, wife of the Kepublican nominee for Vice President, is a great politic-ian. She has rendered her hushand graat ar-vice in the performance of his public daties. In her youpper days, she had aided her father, who was Sheriff of the county where they resided, in the official duties; in fact, he depended on her for the accomplishment of work to be done. On her marrings she immediately installed herself as com-panion and helperate to har hushand, and his anc-

people at large, but the re-THE CHINESE FLEET.

China's nay is composed of four divisions, namely: The Pei-Ho and North Coast, the Foo Chow, the Shanghai and that of Canton. In the Pei-Ho division the only sea-going vessels are the steel deck-armored cruisers Yang Woi and Tehao-Yung, built in England in 1881. Each car-ry two 35-ton 19-inch Armstrong gams on center and the steel deck and the start of the steel car-We hear that the Mother Huperior of the order in charge of the leper avviau at Kakasko was asked by the Minister of Foreign Affairs to go to Molokai to distribute the clothes and other pres-ents to the lepers, which hrave been bought with the funds obtained at the recent fair and enter-tainment. The request was an extremely mkind one. The Mother Superior is a frightful sufferer from associates and though she never hesitates to encounter any personal disconfort or danger when good can come of her facing it, where there is no particular good to be gained, it is a needless crugity to ask this estimable leady to face what is to ther a real hardship. Considerable feeling has been expressed among her friends upon the sub-ject. Any trastworthy person could of course do the work. re the steel deck-armored croisers Yang Woi and ehao-Yung, built in England in 1881. Each car-y two 25-lon 10-inch Armstrong gms on conter avois, commanding a nearly all-around fire. Their speed is 16 knots and they carry coal suff-dont for a continued speed of about 8 knots for a

privos, communing a meany all-around nre.
Their speed is 16 knots and they carry coal sufficient for a continued speed of about 8 knots for a period of four weeks.
The Foo-Cheng and China-Cheng are graphonts also built in Eogland in 1875. They are of 380-tons displacement and carry one 10-inch Varassen gm.
There are also thirtien gunboats built in England graph 1875-81, varying in displacement from 189 to 440 tons. The last four and the largest were named by the Chinese, the Chin. Nang, Chin. Pei, Fei-Fung and Lung-Lang. The others are known among foreigners as the Alpha, Beta, Gammas, Delta, Iota, Kappa, Lambda, etc. According to size they each carry one 11-inch or one 12-inch Armstrong gun and two 12-pounder rifles.
The Foo Chow division consists of unarmored traineers and gunboats andy.
The foet at Shanghai embraces some of the best vessels to be found in any navy. The ironelad frights are index and gunboat andy.
The Tang-Yaen and Chen-Yuen, ironelad frights, beind at inch at the water-line. They have a citadel armitosing parts. Duration of point at 1800 yards.
The Actual and Chen-Yuen, ironelad frights, beind at inch are mounted for instand and with bourspound plates 14 inches thick at the water-line. They law a citadel armitosing 22 inches of iron at 1000 yards. On the bow and stem is a 50-inch long-calibler Krupp gun. Their speed is about 145 knots. These vessels is the antime of the integration of 100 yards. On the bow and stem is a 50-inch long-calibler Krupp guns. Their speed is about 145 knots. These vessels is the single common at Chen armstromed armor. Above the citadel are two barbette towers, in each of their are mounted two 13-inch 45 and 145 knots. These vessels is the armstromed armor. Above the citadel are two barbette towers, in each of the integrative stressels, if handled by any others but Chinese, vould be capable of destroying the set of consent set at a stressel armored, ermiser built in Germany in 1855, is 2500 tons

redijneres and age-long practices. Hence the world sneered at its principles, s a practices, and with the "strong hand" t rash out this new "superstition". But God was in the church. Hence

But God was in the church. Hence it was stronger than all "principalities and powers." 2. This ideal church was composed principally of the poor. When John sent to Christ asking for prose that he was the Messiah. the crowning evi-dence was: "To the poor the Gospel is preached." Impesters and man-invented religions, always address the rich. Mohammedanism, Brahminism, Confucinaism—these all sought entrance to pal-aces and the support of the weathy and powerful. Christ came esting and drinking with publicans and sinners. And these people largely composed that first church. The Apostles were fishermen and tandress from the lowest middle classes - purified in that Pentacostal fiery baptism—foined the mass of that church. NOTICE.

From The Lahaina Side,

Entron Gammun- In your last wack's hane we noticed an article entitled "That Mountain Road," with the sentiment of which we can agree. If residents of other parts of the Island who and only compelled to visit Islandar once a year of more seldom perhaps, find grounds for complaint how much more ought we, who are doomed to liv in the "deserted village" for the best part of a lift time, to rebel against the present condition of ou road.

If our wishes could donice the matter, v have a cartiage drive around the monntain with the next three months if possible. All we new that \$30,000 so long talked of and not yet for understand that one of our citizens

I understand that one of our citizens will ender into an agreement to make a good road for that amount, and why is it beyond our reach? Though spoken of as deserted, Lahnina has yet a few resulents and they are auritous to share the second of life with their next door noighbors. We, generally spokeng, five a community of far-paying, has abiling citizens, and it seems an un-kind fate that destines us to a life of isolation, because of had roads and high steamer rates: so let us see the \$30,000 as soon as possible. <u>A Lovan or Good Roage</u>

A Saitable Appointment. An appointment which will give thorough

As ampointness which will give likeroog a sub-faction to the entire community and which w phase Hawaii in the foremost rank of the nation is the runnored one of the Hou. L. Abulo as a jos Commissioner with Professor Alexander to atten the meetings upon settling the meridian. It was be difficult to find a more satisfield person in t whole country, but why say country, why not the read Pacifie? Of course the bread-minded an highly gifted Lillikalami may be favored by zon by Lillikalami's talents lie rather in the direct may consider that the author of the Generalogi Report had his clause, especially since he fit eport had his claims, especially since 1 mfirmed the Hawaiian theory by his "our mees." But the envillers must reef the alls. Hawaii needs a man devoted to a rose his gradle, a man theroughly with the most repeat advances in m clepse, a man to whom spherical goor

science, a man to whom spherical geometry, sections, trigonometry and the theory of the nite aregas play-things. Such as man is under edly found in the person of the Hon. L. A and the world will confiless ring with app when his speeches shall be and transform. The sarth. It is to be hoped that no untoward rident may prevent this gentleman from proc up on this mission.

Note by the Comp. - Don't believidently the Editor has been fired.

Inter-Island Steamer Time Table

A very useful time table has been desars, J. M. Oat & Co., of this city, he date of sailing of each of our Liken the date of sufficiency of this city, which and the hour they are due at each of one laland sta-atop. This is information for the investing a which will be of equal value to people livin each of our islands and to surrangers and trav-offices understand that every one of the ces in the Kingdoni will be familie

offices in the Kingdoni will be formiate copy each month, and that subscribers supplied by the above firm with each new it appears for \$2.70 a year. Ir, skillion is formation given about our fillend steam dates of the mrival and departure of our all who have to

with the mate, to shore for assistance. A heads crews, consisting of Torlbert, A. Robinson, and S. Monsarratt, belonging to the Myrtle Boat Club, who had performed many meetful acts during the night, was used on dispatch service a node being forwarded to the consignes, Mr W. G. Irwin, the howa covering their two miles and water oys covering their two miles and arriving in own before the steamer. Mr Irwin did no powever give any help either in advice or assis NOTICE TO TAX-PAYERS PERCAUNTS. FIRE ANDER. At 12:10 the Peis returned and pilot Babcock took charge of the vessel in an endeavor to get her of, pilot Shepherd assisting. After 50 minutes of hard pulling, during which the vessel was taken off mich by inch almost, the Peis finally because victorions and a hearty cheer weat up from al-hands when the ship. *Eldowniks* once more glided into deep water. The Myrtle Boat Clab boat was again called into requisition and the crew placed a light on the spar booy for the pilot's use in en-tering the passage. At 2 a.m. the passage was cleared and a few minutes afterwards the vessel NOTICE IS HEREBY GIVEN TO tering the passage. At 2 a.u. the passage of cleared and a few minutes afterwards the ves dropped methor in the harbor, but little dama after such close contact with the coral reefs of the back. PALMAM QUI MEBUIT

PALMAN QUI MERUIT. The great credit is due to Dupaty Dayton, his placing the kedge, which was solely his own idea, heeping the vessel from going broadside on and hus being pisced in a position that would have caused her total loss. To the crew of his Myr-te Club pranse is due, as they were unitiring in their efforts even in the frait shell, to and and as sist in every way, and although the note/forwarded to the consigness broaght no gread results, they still performed other dates of a more articlous and dangerons nature. Mr. Pflugst's offer of assist-ance was given without any desire of gain, and the captain fait grateful for the generous offer. The only person on whom blame fails is the one who seemingly wilfully neplected his duty, pild a Niesser diamster was lack of willow and swell.

Dawaiian Gazette. WEINESDAY, SEPTEMBER 19 1884. To View of Hawaiian Voleanoes, which arrive the same stratum might allow of the passage by which it comes up A this doubtedly produced by compressed and the model of the passage by which it comes up A this doubtedly produced by compressed and the show at the same stratum of the same stratum of the mass wells in the neighborhood thread to be applied attention to be early down the same stratum of the same stratum of the the same stratum of the same stratum of the same stratum of the the same stratum of the same strat Stand at the same level, and when the density varies they may stand steadily at very different levels. What is of still more importance in this question to remember, is, that when two connected columns of lava change their heights by differences occurring in their density, not the slightest symptom of sympathy be tween them is to be expected from such a change. Any one may make some interesting experiment illustrative of the enteresting experiment illustrative of the enteresting experiment for the surface of the lawa course, and which process was to be seen almost duily pear Hulo in 1831. greatest amount of energy in the quietest manner, is surely a most curious and strikng fact, but it does not imply anything adical or anomalous. But in any cate-

cory of facts extreme cases are always eply interesting and sometimes highly Captain Dutton considers the usual hy-

otheses which are offered as the main change. Any one may make some interesting ex-periments illustrative of the action of a molten lavas in tubes connected with a general molten mass, by constructing a closed metal box in the top of which are inserted glass tubes of different diameters are 9 index to 1 inch and then mark oving causes of volcanic action, or the ower which raises and maintains vast col-

umns of molten rock above the surface of the earth—as inadmissible. He reviews rapidly the hypothesis of the percolation of water to the heated rocks, as well as that of the original mixture of the molten rock with water; also the oxydizing or filling the whole with molten stearine. chemical hypothesis, and the crushing, heating and melting theory of Mallet, and Apply lamps underneath so as to heat the tearine equally, but keeping the temperfinds each one entirely unsatisfactory; while the expansion of hot solid bodies on ature under the boiling point. It will then be found that the liquid stands steadlief of pressure, and the assumption of cal increments of heat, he dismisses as the smallest ones it will stand the lowest.

local increments of heat, he dismisses as hardly worth refuting. Captain Dutton however, in studying Hawaiian volcances adverts to a principle of action which I have long looked upon as a main factor not only of the action in these craters but one which illustrates the general principle of volcanic action the

world over. At page 196 he observes: "In the Cal-deras of Moknaweoweo and Kilauea, the lava lakes represent the summits of coland lakes represent the summits of col-sult is a considerable relative excess of that part of the 1881 flow, to the castward temperature and consequent expansion in the earth which are probably very great. When great eruptions occur on the flank of liquid is balanced by a shorter column in the marrow tubes, while in the case takes are drained, and when the erup tions cease the lavas come up in them again, to their former level. But in the history of the mountains the heights of instory of the mountains the neights of these convection currents, so it observed, have no connection with steam or expand-tant, but have steadily increased. In Ki-tauca this has, to our knowledge, increased expansion by heat. In this experiment we can see before us how a liquid mass of Taking all the circumstances into one temperature and density below, may ideration, it seems as if the summits of the uns in each case seems approximate equilib-unns connected with it. The application an in each case sters approximate equilib-levels dependent almost solely upon their to columns of lava connected with one uni-versal substratum standing at different density at any given time." (The italics re mine.)

remine.) Captain Dutton further advocates the heights in those columns is obvious. Mol-ten stearine seems to behave in many reten stearme seems to behave in many re-spects as molten lava does when exposed to cooling. A variety of interesting anal-ogies may be exhibited by the apparatus just described. By reducing the heat, or increasing the cold, a crust will form on the surface of the stearine. Allowing the robable existence of two important facts any attempt at explanation of volcanic ction; namely, a universal liquid or highly lastic substratum, and the fact that cold solid lava is denser than hot molten lava. If this be the relative condition of the arth's solid crust and the liquid substra-um, may not this difference of density be whole apparatus to cool a little, the molten stearine will contract in the tubes, some he simple "missing factor" which causes Il lavas to appear at or above the surface imes retreating from the crust and leav ng a space between. A second crust wil ccasionally form below, illustrating what f the earth

is often seen in the crater of Kilauea. On slightly heating up the apparatus again and breaking up the crust it will be seen to descend with the convection currents Captain Dutton seems however, to conder (page 184) that the hypothesis of the ersal underlying magma being of less ity than the crust which rests or floats and re-melt, just as the lava crusts appear to do in the lakes of Kilanea. it, is not one that is admissible. In view I am aware that he is sustained by one of the most able physicists and mathematicians of the day. Sir William Thomson, who in an address at the Glas-gow meeting of the British Association in 1876 has given it as his opinion that under such circumstances the fractured crust would eight filling a ground incuded. In fine, while the behavior of the molten and solid stearine exhibits what most other experiments with molten substances do, that differences of temperature may pro-duce a reversal of the relative densities in the solid and molten states, there is no diffiwould sink "like a rammed ironchd" Taking all the facts as they probably cuts however, it does not seen necessary to conclude that the denser crust of the culty about the formation of a solid crust on a molten substratum, while it suggests he possibility of even a denser crust reto conclude that the denser crust of the maining supported by a less dense liquid where, from the trees and the jungle from the ages, as far may rest; for, for the invit of the density offered for building up tubes or cones above the crust, in which a higher column of the less dense liquid acting on the lava itself I have never happened to the spheroid – a process which we in

appear as equinorium levels depending upon their mean density at any given time, and so as to be applicable to the gen-eral hypothesis of volcanic action, assum-ing a thin crust of the earth and a molten

abstratum. If this less density of the upper layer If the molten substratum—when at least expands into a fissure in the crust-may be fairly inferred as probable, we should have a ready means of accounting for the different phases of volcanic action whether hydrostatic or explosive, in an cient as well as in modern periods, espe Professor Dana refers to the hanging

cloud constantly seen over Kilauea, as ially when we consider the proof that steam escapes in large quanti-ties from the Kilauea lavas, and that this on with Elie de Beaumont's important the deformation of the constant stringgle between the deformation of the spheroid by internal loss of heat, and the tendency of the earth's rotation to maintain that spheroidal figure cloud often condenses and falls in rain. Much steam from percolating water no doubt arises from fissures all about Kilauer and when it rains hard, from all the hot Accidentally occluded water or steam

places, and from the surface of the lakes and it usually blows away very quickly which seems to be so common in European volcances, might then like geysers take But I attribute the hanging cloud to a dif-ferent cause—simply to that of all hanging its proper position as a supplementary or parasitic phase of volcanic action, while for the behavior of certain active volca-noes, not Hawaiian alone, but such as Charles Darwin refers to in his account of those in the Chilean Cordillera, situated mountains are merely another phase of an our mountains are merely another phase of the same principle. I have two oil paintings executed by Mr. Furneaux, of a remark-able cloud which hung for a long time over far apart from each other, and built up "in great snow-clad cones," far above the and great show-chai cones, far above the earth's mean surface; and the lavas in which simultaneously appearing during the great regional earthquake of 1835, he describes as reminding him of "water splashing up through holes in the ice of a frozen pool when a person stamps on the surface." for a long time as a large half-molten lake. This cloud not only dropped rain, but one urface

liquid underlying magma-if it exhe mass below becomes the substitute for increases with the depth, and may ts smaller density and the crust becomes hydrostatically balanced. Volcanoes such se very rapidly at first, both because e density must increase with the pres s Kilauea and Mokuaweoweo with their ones and conduits containing liquid lava, , and because the iron and other heavy ponents, in all probability increase in built up far above the earth's surface, thus itity as the depth increases. appear as portions of a system of self-act

ng machinery by which the comparatively old crust of the earth is sustained upon The earth's crust even when segments by fissures, must vided into e supposed to be resting upon the liquid distratam very much as the arch stones its less dense, and white hot, molten sub stratum.

bridge are placed, and as the hot d contracts more than the cooler solid As many geologists refer volcanic action nainly to the occlusion of water or steam ust, from loss of heat, the simple weight the crust tends to close the fissures, and in the lavas, rising from great depths, it is a most important point to ascertain whether or not the Hawaiian lavas do, as a rule, e farther the crust descends, the closer ssures tend to become. cclude water or steam. Captain Dutton though he does not attribute the main Third. The liquid into which the crust supposed to be sinking is entirely difaction to this cause-seems to have no doubt of it, and refers to any fragment of nt to that into which the ironclad sinks, the moment the molten lava becomes Hawaiian pahachas as a proof. He might have added an, for both are constantly sposed to radiation in the atmosphere or

cen to loss of heat by conduction in a arrow fissure, it tends to freeze solid, heal crowded with vescicles. But what is the proof that these vescicles are caused by steam or vapor of water? In my view there is no such proof. I have always looked upon ac crack, and prevent any further sink-But as a matter of fact we know that frac-nes do exist in the earth's crust and the these vescicles-wherever found, except in ertain very exceptional cases—as simply ir bubbles. The most notable instance

ava flows out over them sometimes in normous floods, while at other times it of this vescicular structure is to be ob uilds up cones of solid rock and rises in onduits in the center of them far above erved at all our great lava fountains. The lava spouts up under a head of liquid and forms a fountain, and at the same time a he mean surface of the earth. It may be only a question of the relation between lake or pool of molten lava is formed around it. A fountain of any liquid thus thrown into the air and falling into the he density of the lava and the crust, how ar the liquid column has to build itself same liquid below produces a mass of foam or air bubbles which are again thrown up into the air. Lava foam when thus thrown p, to place everything in a state of equin, and to prevent any further sinkig of the crust, even if the increasing den-ty below did not do so.

up is instantly converted into glass-foam, which is the simple origin of our so-called This principle is partly illustrated in a col covered by ice in a heavy frost and pon which is a number of skaters. The ean density of the ice including the pumice, it being a congeries of glass air cells so light as to float in water.

When the light frothy mass of molten glass runs away on the river of molten lava which proceeds from these fountains, it cools rapidly and forms the clinkery sur eight of the skaters may be greater than at of the water, and when a crack occurs it the water will often appear above the urface, and yet in a heavy frost there is ittle danger, as the water freezes rapidly and thickens the ice or heals the crack. face of our ad streams. The interior of an ad stream, when it has had time to settle and quietly cool, is often quite compact, without vescicles. But even the interior But, we are told that if the appearance without vescicles. But even the interior portion which pours in little cataracts over the uneven surface of the ground, must be constantly enclosing air bubbles which get frozen in. Let any one watch even a genf the molten substratum above the sur-ace of the crust be due to the weight of ae crust, the lava in each of the different ses should stand at the same level. and the instance of the liquid columns in the conduits of Kilauca and Manna Loa le stream of water pouring from a small eight into a reservoir, he will find the s constantly brought forward by geolovater in the track of the entering stream gists to prove that inasmuch as they con-stantly stand with the surface of the one some 8,000 to 10,000 feet above the level o be full of air bubbles, a fountain or catract produces a mass of foam.

I am well aware that the freezing pro of the other, it is impossible that they can be connected with the same interior liquid tends to exclude air bubbles and even olids in solution, and this effect is com mass. A little reflection, however, shows that this does not necessarily follow. It nonly seen in our pulsechor lavas. The outer thin crust is often composed of a compact glass without vescicles; the freezis well known that a large portion of the upper and interior masses of Hawaiian mountains have a density when cold of about 2.90, whilst the more basic or olivin ig process, however, which of course ing process, however, which of course, commences from the outside has frozen the bubbles in, for just inside the compact glassy coating, perhaps half an inch or more thick, the air bubbles are closely comtic outflows on the lower slopes have very commonly a density of 3.10. If we may acted.

commonly a density of 3.10. If we may suppose that the same proportionate dif-ference exists in the density of the moltea columns of lava in Kilauea and Mauna Loa, and assume the thickness of the At the lava lakes of Kilauea other pro esses are constantly going on to fill the nolten lavas with air bubbles which get Lon, and assume the thickness of the earth's crust beneath the top of Mauna Loa to be 25 miles, this alone would cause near-ity the difference in height of the two col-mus which actually exists. But indepen-dently of the difference in composition, the heat of the more powerful column of Mauna Loa, and which is usually a closed column that is not exposed to radiation, may be expected to be nucle creater then frozen in in the same manner. For in stance, as I interpret the facts—which slightly differs from Captain Dutton's ex-planation—the cooled upper layers of lava descending, and the hotter layers from be low rising, cause violent convection cur-rents and even whirlpools, which draw down the air with them. This air immebottomi that is not exposed to radiation, may be expected to be much greater than that of the Kilance column, which is con-stantly exposed to radiation and general cooling. It will therefore be more exdiately gets intensely heated in the white hot lava, becomes in consequence a highly that of the Kihatea column, which is con-stantly exposed to radiation and general cooling. It will therefore be more ex-panded or less dense. A very simple ex-periment will illustrate how easily the levels of connected liquids may stand at floating crust. We have only to take a block of wood, say three inches square on each face, and bore two half inch holes arough it in which insert glass tubes proborhood of the lakes, and when it rain pecting, say two inches above one face of the block. Weight the block so that it will just float flush with the water level, the ghas tubes projecting upward. Now pour oil into one tube and alcohol into the

the lava itself I have never happened to detect it. Perhaps others have been more the Pacific Ocean see in action all around us in the slow subsidence of its bed, not-Why is it necessary, however, fortunate to imagine the cells in our lavas to be the withstanding the local upheaval of activ result of steam, when air gives such a simrolcanic areas—may perhaps indicate on neans at least, by which the molten sub le account of them?

almost daily near Hilo in 1881.

that

ble account of them? But there is still another phase in the schavior of our lavas, for which steam is constantly brought forward as the origin, and Capt. Dutton seems inclined to follow constantly brought forward as the origin, and Capt. Dutton seems inclined to follow the usual interpretation—I mean the hol-low mounds of *pathachae*, which some times cover, in close succession, hundreds, perhaps thousands of acres of ground. He observes: "The numberless mounds or bos

pabachor were all formed in detail in the t manner already described, by repeated of outshoots of streamlets from beneath the hardened crust behind. As these belches of lava cool they exclude the occluded ndary feature. W. L. Honolulu, August 25th, 1884.

steam, and the mass swells up by the formation of myriads of vescicles, and often by the formation of great hollow General Advertisements

blisters underneath." Having watched the formation of these nounds of *publiched* in 1859 and in 1881, it did not appear to me that steam was con-cerned in the process. They seemed to be a simple hydrostatic effect in a liquid of which the crust cools rapidly. A viscous liquid usually tends to flow, if some what slowly released, in flattened spher what slowly released, in naturened spher-oidal masses, as porridge does, or-on a smaller scale like quicksilver. The rapid cooling and stiffening of the crust, fixes, as it were, these flattened spheroidal masses, and the molten lava flowing from the aa bank, or from a somewhat higher level behind, and protected by the crust from radiation, pours into the rounded mass under a small head of pressure, and swells it out while the crust is somewhat sweins it out while the crust is somewhat plastic. But now two things occur, the crust gets stiffer and the head of liquid inside gets higher. A break has to occur somewhere under the head of liquid pressure. This naturally happens at the low est side, the molten lava belches out again

and forms another mound alongside but a little lower down the slope. And so the process goes on. The molten lava often runs all out of the mound, leaving the hardened hollow dome, just as it runs out of the arched stream, leaving the crust with a tunnel underneath. Sometimes the contraction of the cool crust of the domes, causes the center piece of the top to crack in a rudely pentagonal or hexag onal shape and to fall in, but sometime it remains entire. In my view, if there

were no water, steam, air or elastic gases in the planet, these domes would form essentially as they appear, while the Ha-waian eruptions and fountains of lava might continue to spout as they do to day The whole seem to be simple hydrostatic effects, the result of liquids endeavoring to find the level due to their density There is this peculiarity about these li quids, however, namely, that the slightes cooling makes them first viscid, then sol d, so that they do not always respond as freely to changes of level as ordinary li-quids do, especially in narrow and crooked passages, or when exposed to radiation. passages, or when exposed to radiation. From this cause, also, they exhibit the peculiarity of running up hill in certain circumstances. That is to say, the rapid-ly cooling crust forms a pipe in which the If y cooling crust forms a pipe in which the liquid under a head of pressure from be-hind ascends a slight slope in front of it, thus sometimes crossing hollows on the principle by which we see the water conveyed in pipes across gulches in the course of the Spreckels ditch on Maui. On some-what similar principles, that is, liquid pressure from behind, and rapid cooling and solidifying outside, it is well known that a small, slowly advancing pahocher stream will sometimes cross on the surface of a narrow stream or pool of water and when the water lowers, a natural bridge will be left standing. Mr. Fur-neaux has a picture of one of these natural

bridges so formed. Any one may have seen the lava thus advancing a short dis tance over the surface of the pools nea Hilo in 1881. The arched form of the crust over the lava tunnels on Hawaii has also sometimes been attributed without question to ex-

been attributed without question to ex-panding steam or gases There is, how ever, one evident reason for it, namely, that the middle of the molten stream is hotter than the sides, and therefore more expanded But, besides this there is a well known principle which causes even above merions to be higher to see slowly moving rivers to be higher towards the center than at the sides, that is, the

ng the heavier components below, may be any thousand feet above the mean sur face of the earth's crust, owing to its les density. However this may be, Hawaiian oleanoes, in the grander phenomena a cell as in the details of their action, seen to be operated by hydrostatic rather than by elastic forces, although the latter may well be every now and then exhibited, a a noisy and demonstrative, but really see W. He reviews rapidly the hypothesis of the percolation of water to the heated rocks, as well as that of the original mixture of the molten rock with water; also the oxydizing or

Junction Cazette.WEDNESDAT, SEPTEMENT 10 1981The VARIAN VORANCE, NETTEMENT 10 1981The VARIAN VORANCE, NETT The late Mr. Poulet Scrope, in his work on volcances, made a serious mistake in quot ing Mr. Coan in aid of the mixed steam and lava hypothesis, in which he makes ing a that "from the arging of the term." and lava hypothesis, in which he makes him say, that "from the surface of the lowa ubstratum current of the eruption of 1852, the steam rose in fleecy wreaths towards heaven." If this less density of the upper layer

unns of lava change their heights by dif deeply interesting and sometimes highly nstructive." Captain Dutton considers the usual hy-potheses which are offered as the main moving causes of volcanic action, or the power which raises and maintains vast col-umns of molten rock above the surface of

General Advertisements THE LIEBIG VERVO DR. LIEBIC'S WONDERFUL CERMAN INVICONATOR

"Some time in the latter part of December, 1813, a man by the name of William Kemble, aged about 23, (a seaman on board the U. S. frigate 'President,' commanded by Commodor John Rodgers, on a cruise then near the West-ern Islands) was brought to me from one of the tops, in which he was stationed, having burst a vessel in his lungs, being at the time in great danger of instant death, the blod gubing with great violence from his mouth and nostrils. With much difficulty I suc-ceeded in stopping the discharge, and he was put upon the use of remedies suited to his case. I visited him often and had the best of opportunity of becoming acquainted with his temper, habits, and instellectual attainments and unster all circumstances during his illness, found his language and behaviour such as stamped him the rough, profane and illiterate assert it, that he could neither read nor write It is certain that his conversation never dif-ters of in the least from the was intervent and sailor. It is my belief, although I could not assert it, that he could neither read nor write. It is cortain that his conversation never differed in the least from the most ignorant and abandoned of his associates, constantly mixed with oath and the lowest valgarity. Had he possessed talents or learning, he must have betrayed it to me during his long confinement. The faneral service read, and accelers like the service read of the first gun, he could restrain himself no longer, but regardless of my admonitions and of his own danger, he rushed upon deck and flew to his gun, laying hold to help run her out. A fresh and tremenduous discharge from his lungs was the consequence, and he was brought down to me again in a most deplorabla state. I apprehended immediate death, but by the application of the proper remedies, I succeeded once more in stopping the hemor-rhage, by which he was reduced to a state of the most extreme debility. Being near the the most extreme debility. Being near the equator and suffering much from heat, his equator and suffering much from heat, his hammock was slung on the gun deck between the ports affording the best circulation of air. He continued for some time free from hemor-rhage, but was under the constant use of med-icine and was confined to a particular dist. This made him fretful and he would constantly charge my mates with starving him, at the same time downing them is the starving him, at the icine and was confined to a particular diet. This made him fretfal and he would constantly charge my mates with starving him, at the same time damning them in the true sailor fashien. After some time, being again called to quarters at night, he was necessarily re-moved below to the sick herth (commonly called bay.) This was followed by another discharge of blood which was renewed at in-tervals until his death. "On January 17th, Dr. Birchmore, my first mate, came to me on deck and reported Kem. The sense to me ou deck and reported Kem-ble to be dead. I directed him to see that his ble to be dead. I directed him to see that his casion, preparatory to committing his remains to the deep. About two hours after this Dr. Birchmore again called on me. He said that Kemble had come to life and was holding forth. casion, preparatory to committing his remains to the deep. About two hours after this Dr. Birchmore again called so me. He said this Kemble had come to life and was holding forth to the sailors in a strange way. I directly wet down, where I witnessed one of the moet remarkable and unaccountable transac-tions that had over been the lot of man to be-hold. Kemble had awakened as it were from sleep, raised himself up and called for him mesemates in particular, and these men who were not on duty, to attend to his words. Ha told them that he had experienced death, but was allowed a short space of time to return and give them as well as the officers, som direction for their future conduct in life. In this situation I found him, surrounded by this per heard, all was as solem as the grav-His whole body was as cold as death cent mixes, hot a dry eye was to be seen, or a whis per heard, all was as solem as the grav-His whole body was as cold as death cent make it. There was no palisation in the wrists, the temples or the chest perception to and pertinent address to the medica gentleme, he told me is a perenty to make had samething to say to him, before he finally fet us. The Commodore Rodgers to him as had something to say to him, be degrets to him as had as one filter supporting him so made. England whis the stoutes heart.
