the Japanese-American community.

The Japanese-American community had suffered losses in the attack on Pearl Harbor, and the isolationist movement gained momentum. The United States government began to implement policies to restrict immigration and naturalization of Japanese-Americans. The Nisei, or second-generation Japanese-Americans, were particularly affected by these policies, as they faced discrimination and limited opportunities. The isolationist movement was also influenced by the growing анти-японская (anti-Japanese) sentiment in the United States, with some Americans advocating for the internment of Japanese-Americans and the restriction of their rights.

The isolationist movement had several leaders, including Senator Arthur Vandenberg and Representative Gerald Nye. These politicians argued that the United States should avoid entanglement in European affairs and focus on its own interests. The isolationist movement also had support from certain segments of the American military and government, who believed that America's primary focus should be on its own security rather than becoming involved in European conflicts.
Jim: "You couldn't be satisfied ungratefully."

It.

They have to pay homage to them.

Marchester's first family. Every come and beg. The Charters are liked that fight— you didn't back me, you've las

quietly. "Your eyes asked me to help me, I mean they had a legal right to mean for you to take a risk."

She was furious. She wanted to strike you. "I'm sorry."

a hard. "Get permission before you fell back, then crumpled to the ground.

"I'm an old man." It would take much time and money to make your dream become true.

He turned away and mounted his horse. "Come along," he said.

TWO FRENCHMEN—War makes enemies of fellow-countrymen, as here General Catroux, left, of the attacking Free French forces, chats with General Andre de Vrbigny, defending Vichy leader, after signing armistice ending the Syrian campaign.

We Sure Hope You Like Our New Name, Folks!

The voice is Windy's. But the wish is Paddles's, too. And the occasion is the change of the title of Dick Macaroon's daily comic strip from Jim Hardy to "Windy and Paddles," in recognition of the interest of readers everywhere who have shown in the trials and the triumphs of the cowboy with the ten-gallon heart and his sagebrush Seobiscuit. As you look for more of the excitement and fun they kick up, look—from now on—for the daily strip under its new name—"Windy and Paddles."

**CHEESE MAKING IN U.S. HAILED**

**GENEVA, N. Y. (U.P.)— Back in 1900 one house and wagon delivered the nation's entire output of pasteurized process cheese, all of which was sold in Chingos. Now, more than 2,600,000 and pounds of said cheese is used annually in the manufacture of pasteurized processed cheese in the United States, according to Prof. J. G. Marquardt, dairy engineer at the New York State Agricultural Experimental Station.

Marquardt and the industry has developed the need for a product that is uniform, sanitary, free from off-flavors, and suitable for modern merchandising methods, including steeping quality.

"While the procedure for making pasteurized processed cheese is relatively simple," he said, "it has been hemmed in almost completely with private patents until recently when some of the original basic patents expired."

Pasteurized processed cheese is natural cheese blended, mixed, and packaged. Marquardt explained. Only carefully selected cheeses are used since the finished product cannot be better than the natural cheeses from which it is made.

Marquardt said control of the natural cheese supply is the key to success in this industry, therefore studies made at the experimental station have been on improving the quality of natural cheeses are being followed closely.

The station has developed a procedure forming pasteurized processed cheese to replace a type formerly imported from Holland, but no longer available. The state agricultural department has called milk plants and factories to carry this work in the Empire State and the formula also being used in Wisconsin.

It is conservatively estimated that 1,000,000 packages of this blend made by the station formula will be marketed annually by one company alone to replace a product originally imported from Holland.

**COCONUT SHELLS IN GAS MASKS**

SYDNEY, Australia (U.P.)— Creation of a factory to produce activated carbon from coconut shells is hailed as an example of wartime resourcefulness. Activated carbon is an essential component of gas masks.

**PUMPKINS** were in good demand and market was active under right receipts. Prices ranged from 3 to 5c per lb.

**SQUASH** market was weak due chiefly to quality factor. Summer squashes, in particular, showed big losses with blemishes and brown spots on the outside.

**WATERMELON** output is chiefly from Oahu fields with some from off-islands. Close 100% from the previous week. Demand was steady with prices from 8c to 12c per lb., mostly lower.

**AVOCADO** receipts totaled a little over 8 tons this past week, mostly from the mainland. Prices ran from 1.50 to $1.75 per dozen on all sizes were noted in some quarters.

**CARROT** market was in somewhat weaker tone, under pressure of marketable supplies from the mainland and some from off-islands.

**SUMMER SQUASH** market was weak due chiefly to quality factor. Summer squashes, in particular, showed big losses with blemishes and brown spots on the outside.
