

The new Sanitation building was completed during the month of October and the gear was moved from the old building. The new building has proved successful in that it is more readily accessible to visiting Native Sanitary Inspectors and the method of storage has improved, thus facilitating ease of operation.

The water carried sewage system is functioning satisfactorily and with the exception of a few days there has been sufficient water. It is expected that the new system from Babelthaup will be in commission next quarter.

The compliment of Hospital Corpsmen is 12. There are six on board with a third class due to leave in early January, and the Chief around the first of February.

The incidence of venereal disease is still high.
