T. Results of tuberculin tests by age group and sex, Truk District: 1948-50.....	55
U. Selected diagnoses or diagnostic groups by island or atoll, Ponape and Truk Districts: 1948-50.....	56

SUPPLEMENT TO—
HEALTH SURVEY OF THE TRUST TERRITORY OF THE PACIFIC ISLANDS

This supplement, a summarization of data collected by the U. S. S. Whidbey from Ponape and Truk Districts, completes the report on the Health Survey of the Trust Territory of the Pacific Islands. Ponape and Truk Districts were not included in the original report because it was completed several years before the health cards from these two districts were obtained for statistical tabulation. No attempt was made to integrate these data when they became available, since this would require extensive revision of the original report. The latter was considered inadvisable in view of the fact that the records from Ponape and Truk were much less complete than those from the other districts and did not lend themselves to the same analytical treatment or reliability.

The incompleteness of the data from Ponape and Truk Districts was evidenced by the very small proportion of the population covered by the survey in those districts as compared with coverage of the other three districts. For the five districts, the estimated population compares with the number of natives examined as follows:

District:	<u>Estimated population</u>	<u>Natives examined</u>	<u>Percent of population examined</u>
Palau.....	11,340	10,575	93
Saipen.....	6,280	4,999	80
Marshall Islands.....	11,000	6,572	60
Truk.....	15,600	5,510	35
Ponape.....	10,000	1,936	19

In addition to the fact that health cards were received for only a small proportion of the population of Truk and Ponape, the health cards which were received were quite incomplete, with some items missing on all cards and others missing on a large majority of the cards. About one-third of the 1,936 cards from Ponape District had very little information on them—most items were not filled in. Chest X-ray data were omitted on all cards from Ponape District, and many of the cards from Truk did not show any information on tuberculin test, stool examination or Kahn's test. Pulse rate was omitted on cards from both Ponape and Truk Districts. A further inadequacy of the data available for the two districts was the absence of narrative summaries which were so useful as background material in the report covering the other three districts.

In spite of the paucity of the data from Truk and Ponape, it is presented here as nearly as possible in the same general format as that used for Palau, Saipan, and the Marshall Islands. Added to the original study, this supplement rounds out as completely as possible the presentation of statistical data relating to the Health Survey of the Trust Territory of the Pacific Islands. The data must, however, be evaluated in the light of the scant coverage of the population involved. The tables and related comments pertain only to the examined population and may or may not be representative of the entire population.

AGE

The median age was about the same for the population of Ponape as for that of Truk—21.4 and 21.8 years, respectively. In both districts the median age was under 30 on each island covered by the survey.

As compared with the other three districts, Ponape and Truk had a median age higher than that of Saipan (17.3), but below that of Palau (25.5) and the Marshall Islands District (23.6).

(Text tables A and B)

MARITAL STATUS

In Ponape and Truk, as in the other districts of the Trust Territory, females married earlier than males. In all age groups up to 45 years of age there were proportionately more married females than males. The reverse was true for those 45 years of age and over.

HEIGHT AND WEIGHT

Generally speaking, the inhabitants of Ponape were slightly shorter and a little heavier than the inhabitants of Truk in the same age groups (see table D and E).

(Text tables C, D, and E)

Comparison of the average weight of the inhabitants of Ponape and Truk with those of the other three districts shows that, as a general rule, for a given height the inhabitants of Ponape were heavier than those of the Marshalls, but not as heavy as the population of Saipan. The inhabitants of Truk, on the other hand, weighed less, on the average, than the inhabitants of any of the other districts.

(Text tables F and G)

Table A.--PERCENTAGE DISTRIBUTION, BY AGE GROUP, PONAPE AND TRUK DISTRICTS: 1948-50

Age group (years)	Total	District

45-64.....	3.2	3.8
65 and over.....	5.2	3.0

Table G.--WEIGHT DIFFERENCES BETWEEN SEXES FOR SELECTED
AGE GROUPS, PONAPE AND TRUK DISTRICTS: 1948-50

Age group (years)	District	
	Ponape	Truk
	Average male weight exceeds the average female weight (in pounds) by—	
20-24.....	16.2	14.1
25-34.....	17.9	19.4
35-44.....	18.4	23.1
45-64.....	8.2	24.5
65 and over.....	36.1	19.9

BLOOD PRESSURE

The median blood pressure readings—systolic and diastolic—are shown in table H for 3 age groups—15-24, 25-44, and 45 years of age and over. The median readings were higher in Ponape than in Truk for both sexes in each age group. It is of interest that the median blood pressure readings in both Ponape and Truk were below those in Saipan, Palau, and the Marshall Islands Districts.

(Text table H)

STOOL EXAMINATIONS

Stool examinations were made for 2,421 inhabitants of the Truk District (15 percent of the estimated population) and for 1,327 persons in the Ponape District (13 percent of the estimated population). Nearly three-fourths of all stools examined in the Ponape District and 35 percent of the stools examined in Truk were positive. On all of the 11 islands of Ponape which were covered in the survey, over 50 percent of the stools examined were positive. Between 25 and 49 percent of the stools examined were positive on 3 of the 4 islands in the Truk District where stools were examined, and 55 percent were positive on the other island.

Little difference in the percentage positive occurred by sex or age group, except that on Truk positive stools were less frequent among individuals under 5 years of age than in other age groups. This difference was not true in Saipan, Palau, and the Marshall Islands.

(Text tables I, J, and K)

The most prevalent intestinal parasite in Ponape District was found to be *Ascaris*, while in Truk the frequency of hookworm and *Trichuris* was greater.

(Text table L)

KAHN TESTS

Kahn tests were given to 5,740 inhabitants of the 2 districts—about 26 and 16 percent of the population of Truk and Ponape, respectively. The distribution of islands by percentage of positive reactions to the Kahn tests shows that on all but one island in each of the two districts positive reactions were noted for 50 percent or more of the tests.

(Text table M)

No definite pattern was evident in the distribution of positive reactions by age in either district.

Table H.—MEDIAN SYSTOLIC AND DIASTOLIC BLOOD PRESSURE, BY AGE GROUP AND SEX, PONAPE AND TRUK DISTRICTS: 1948-50

District and sex	Age group (years)					
	15-24		25-44		45 and over	
	Systolic	Diastolic	Systolic	Diastolic	Systolic	Diastolic
Ponape:						
Male.....	108	64	112	69	118	72
Female.....	94	63	107	66	111	68
Truk:						
Male.....	113	72	115	73	118	75
Female.....	112	73	112	73	117	76

Table I.--PERCENTAGE OF STOOLS POSITIVE FOR INTESTINAL
PARASITES, BY AGE GROUP, PONAPE AND TRUK DISTRICTS:
1948-50

	Total	District	
		Ponape	Truk
All ages.....	55.1	72.6	45.5
Under 5.....	37.5	0	37.5
5-14.....	54.5	72.0	44.6
15-24.....	56.8	68.8	49.0
25-44.....	55.1	75.7	43.1
45 and over.....	57.6	76.9	49.0

Table J.—PERCENTAGE OF STOOLS POSITIVE FOR INTESTINAL PARASITES, BY SEX, PONAPE AND TRUK DISTRICTS: 1948-50

Sex	Percentage positive		
	Total	District	
		Ponape	Truk
Total.....	55.1	72.6	45.5
Male.....	55.0	72.0	46.5
Female.....	55.2	73.2	44.2

Table K.—DISTRIBUTION OF ISLANDS, BY PERCENTAGE OF
STOOLS POSITIVE FOR INTESTINAL PARASITES, PONAPE
AND TRUK DISTRICTS: 1948-50

Percentage of positive stools	Number of islands		
	Total	District	
		Ponape	Truk
Under 25.....	-	-	-
25-49.....	3	0	3
50-74.....	9	8	1
75 and over.....	3	3	0

Table L.—PERCENTAGE OF POSITIVE STOOLS, BY PARASITIC INFESTATION, PONAPE AND TRUK DISTRICTS: 1948-50

Parasitic infestation	Percentage positive		
	Total	District	
		Ponape	Truk
All parasites.....	55.1	72.6	45.5
Hookworm.....	23.8	21.6	25.1
Trichuris.....	23.1	26.2	21.4
Ascaris.....	22.9	42.7	12.0
Other.....	0.1	0.1	0.1

Table M.—DISTRIBUTION OF ISLANDS, BY PERCENTAGE OF POSITIVE KAHN REACTIONS, PONAPE AND TRUK DISTRICTS: 1948-50

Percentage of positive Kahn tests	Number of islands		
	Total	District	
		Ponape	Truk
Under 25.....	-	-	-
25-49.....	2	1	1
50-74.....	11	9	2
75 and over.....	4	1	3

The percentage of positive reactions for the examined population of Ponape and Truk Districts as compared with those of Saipan, Palau, and Marshall Islands Districts is as follows:

	<u>Percent positive</u>
Ponape.....	63.3
Truk.....	57.8
Palau.....	65.4
Marshall Islands	38.1
Saipan.....	30.4

(Text table N)

TUBERCULIN TESTS

The data on tuberculin tests are of doubtful value. Very few health cards from the Ponape District had any information on tuberculin tests. The actual number of tests given in this District was unknown, as, except for one island, only positive reactions were recorded. For this reason, no data are shown on the percentage of positive tuberculin tests in the Ponape District. However, the number of positive reactions reported amounted to 8 percent of the population, so it is known that tuberculosis was present in that District.

Data from the Truk District were more complete and are shown in tables O through R. In all of the islands of the Truk District, the percentage of positive reactions ranged from 30 to 60 percent of those tested.

(Text tables O and P)

MISCELLANEOUS DIAGNOSES

Dermatophytosis was the diagnosis most frequently recorded in the survey of Ponape, with pterygium ranking second—prevalence rates were 114 and 78 per 1,000 examinations, respectively. In Truk this rank order was reversed and the prevalence rate was 243 per 1,000 examinations for pterygium and 177 per 1,000 for dermatophytosis. Neoplastic diseases were recorded with greater frequency among the population of Truk than of Ponape.

(Text table Q)

Table N.—PERCENTAGE OF POSITIVE REACTIONS AMONG
