## We should Blot Out Disease in Its Early Stages.

The disease commences with a slight derangement of the stomach, but, if neglected, it in time involves the whole frame, embroiling the kidneys, liver, pancreas, and by fact the entire alimentary system, and the afflicted drags out a miserable existence until death gives relief from suffering. The disease is often mistaken for other complaints; but if the reader will ask himself the following questions, he will be able to determine whether he himself is one of the afflicted—Have I distress, pain, or difficulty in breathing after eating? Is there a dull, heavy feeling, attended by drowsiness? Have the eyes a yellow tinge? Does a thick, sticky mucus gather about the gums and teeth in the morning, accompanied by a disagreeable taste? Is the tongue coated? Is there pain in the sides and back? Is there a fullness about the right side as if the liver were enlarging? Is there vertigo or dizziness when rising suddenly from an horizontal position? Are the secretions from the kidneys highly colored, with a deposit after standing? Does food ferment soon after eating, accompanied by flatulence or belching of gas from the stomach? Is there frequent palpitation of the heart? These various symptoms may not be present at one time, but they torment the sufferer in turn as the dreadful disease progresses. If the case be one of long standing, there will be a dry, hacking cough, attended after a time by expectoration. In very advanced stages the skin assumes a dirty brownish appearance, and the hands and feet are covered by a cold sticky perspiration. As the liver and kidneys become more and more diseased, the muscular system wastes, and the usual treatment proves entirely unavailing against the latter agonizing disorder. The origin of this malady is indigestion or dyspepsia, and a small quantity of the proper medicine will remove the disease if taken in its incipient stage. It is most important that the disease should be promptly and properly treated in its first stages, when a little medicine will effect a cure, and even when it has obtained a strong hold the correct remedy should be persevered in until every vestige of the disease is eradicated, until the appetite has returned, and the digestive organs restored to a healthy condition. The surest and most effectual remedy for this distressing complaint is "Selgel's Curative Syrup," a vegetable preparation sold by all chemists and medicine vendors throughout the world, and by the proprietors, A. J. White, Limited, London, E. C. This Syrup strikes at the very foundation of the disease, and drives it, root and branch, out of the system. Ask your chemist for Selgel's Curative Syrup.

"East-street Mills, Cambridge-health, London, E. C., July 24th, 1882.  
"Sir,—It gives me great pleasure to be able to add my testimony in favour of a curative agent. I had suffered for some length of time from a severe form of indigestion, and the long train of distressing symptoms following that disease. I had tried all possible means to get relief, but by the best medical advice, I had swallowed sufficient of their stuff to float a man-of-war, so to speak, but to no avail. A friend of mine, coming on the scene in the midst of my suffering, brought with him a bottle of your Selgel Syrup; he advised me to try it, stating he felt confident it would benefit me. Being weary of trying so many drugs, I endeavored to before that, thinking it could not possibly do me any good, but ultimately determined to take the Syrup. After doing so for a short time it worked such a change in me that I continued taking it for nearly two months, and I then felt thoroughly cured, for I discontinued its use for five weeks, and feel in the best of health, and can partake any kind of food with ease and comfort. I am therefore thankful to you that, through the instrumentality of your valuable medicine, I am restored to the state of health I now enjoy.—Yours truly,  
W. S. FORTNER.

"To Mr. A. J. White."  
Those who are in the "Asthma Parous" should lose no time in obtaining relief by the use of "The Rosinwood Tar Mixture." It does not use the medicine unless you will follow all the directions "to the letter."  
Poor Asthma sufferers, who are strangers to "Asthma's" sweetest remedy, "The Rosinwood Tar Mixture," of "The Rosinwood Tar Mixture." Quiet refreshing sleep will follow its use.  
"Waterloo House, London 8116, Chiswick."  
February 17th, 1882.

"Messrs. White and Co., London."  
Gentlemen,—It is with great pleasure that I add my testimony to the wonderful effects of Selgel's Syrup. For years I had been suffering from bilious attacks, which began with giddiness; then a mist would come before my eyes, so that I should not be able to recognise any one or anything at the distance of a yard or two from my face. This would be followed by excessive trembling of my knees, so that I could not stand without support, after which a severe headache would occur, lasting often two or three days. I have tried various remedies for these distressing symptoms, but until I tried Selgel's Syrup I had no relief. Since then I have had excellent health in every respect, and I feel I feel a headache coming on I take one dose of the Syrup, which arrests it. I trust that this testimony may be the means of inducing others who suffer as I used to try the Syrup, as I feel sure they will receive speedy benefit and ultimately be cured. I beg to remain, yours faithfully,  
"A. H. HORTON."

Selgel's Operating Pills prevent ill effects from excess in eating or drinking. A good dose of these pills renders a person fit for business in the morning. If you have Asthma use "The Rosinwood Tar Mixture."

### WATER.

The Mining department of New South Wales, in its report for 1885, gives some interesting information about the work that it is doing with the water-auger in Riverina. With the report is issued a map showing the localities in which boring has been tried. Riverina is spotted over, at wide intervals, with red and blue rings, showing where fresh and salt water has been struck. During 1885 11 augers were employed, with the result that "25 bores have been sunk on stock routes, the cost per foot being £1 18s. In four of these bores fresh water was obtained, namely: In one bore on the Bourke and Wannaring line, at a depth of 427ft., the quantity being 1,320 gallons per diem; in two at Goodooga, at 68ft., and 67ft., respectively, the quantity in each bore being 24,000 gallons per diem; and in one on the Hay route, from 84ft., to 200ft., the quantity being 3,600 gallons per diem. In addition to these, good stock-water, to the extent of 1,440 gallons per diem, was obtained on the Wilcannia route, at 110ft., to 145ft., and brackish water, considered fit for stock, was obtained on the Wilcannia and Silverton route, at 290ft., and 293ft., respectively, the quantity in each bore being 2,000 gallons per diem; and it was also obtained in a third bore, at 49ft., quantity not reported." Bores were sunk for private parties, at a charge of 8s. 3d. per foot, on the Gorgan station, and fresh water obtained at 158ft., 9,792 gallons per diem; at 182ft., 12,672 gallons; at 150ft., 12,000 gallons; and at 173ft., 17,280 gallons. Mr. Snee, the superintendent of drills and augers, has in view the forming of a chain of artesian wells along the main stock routes, so as to conduct traffic from the western interior to the railway stations. Boring is being hopelessly carried on between Bourke and Wannaring, and if the results come up to expectations the line of wells will be extended to Milparinka and Tibooburra in the Mount Browne district. In some parts the bores may have to be put down from 700ft., to 800ft., but in other parts from 400ft., to 500ft., will be the probable depths. If scarcity of water, which is the great drawback, be once overcome by artesian wells, all the stock and wool now finding its way from Cooper's Creek, Mount Browne, and Mount Poole districts would be directed towards the Bourke railway station and to Sydney." The water-boring machinery, Mr. Snee remarks, could be greatly improved. Its clumsiness, which increases the cost of boring very considerably, almost places it beyond the reach of private individuals; a great deal of the machinery which is made out of cast iron could be made out of steel, so as to reduce the weight, and thereby reduce the cost of transit.—"Scientific American."

### HOW TO CURVE A BALL.

The theory is as simple in its rules as it is easy of demonstration practically. It is as follows: The ball, in its horizontal flight through the air from the hand of the thrower—technically known as the pitcher—is retarded in its forward motion by the resistance of the air, which not only exerts a pressure on the face of the ball, but also a resisting force on its sides by friction. Now, if the ball is simply thrown forward without any special bias being given it, the friction of the air is equal on each side of it; but if it be made to rotate on its own axis from right to left or left to right, the conditions are at once materially changed, inasmuch as in the latter case one side of the ball's surface is made to move forward through the air with twice the rapidity of the other side, and to the extent of this increased lateral friction bears. The result of this changed relation is naturally a curve in the line of its delivery in the direction of the side on which its progress has been retarded. This is the simple philosophy of the curve of modern baseball pitching. The application of the theory in practice is to learn to give the necessary bias or rotary motion to the right or left, in order to produce the "in curve" or the "out curve." —"Scientific American."

### THE HEBREW RACE.

The Hebrew race is distributed over the Eastern continent as follows: In Europe there are 5,400,000; in France, 63,000; Germany, 502,000, of which Alsace-Lorraine contains 39,000; Austria-Hungary, 1,644,000; Italy, 40,000; Netherlands, 82,000; Roumania, 265,000; Russia, 2,552,000; Turkey, 105,000; and in other countries 35,000; Belgium, containing the smallest number, only 3,000. In Asia there are 319,000; Asiatic Turkey, 47,000; (in Palestine there are 25,000); Asiatic Russia, 47,000; Persia, 18,000; Middle Asia, 14,000; India, 19,000; and China, 1,000. Africa contains 550,000; Egypt, 8,000; Tunis, 55,000; Algiers, 35,000; Morocco, 60,000; Tripoli, 6,000; and Abyssinia, 200,000. The entire number of Hebrews in the world is nearly 6,300,000.—New York Tribune.

## SETTLING IRVING'S INDEBTEDNESS.

At the Register of the Treasury's office a letter has been received from an old lady resident of Kittanning, Pa. She wrote that she observed in a published report that Washington Irving was represented as a debtor to the Government in the sum of 3 cents, left over from his occupancy of the post of Minister to Spain in 1848. She represented herself as a relative of Irving and inclosed 3 cents, saying she wanted the account closed up, as she was certain Mr. Irving could not have been aware of it. In conclusion she wrote: "And furthermore, honored Sir, I wish you to understand that Mr. Irving was a scrupulously honest man." The account has been formally closed and the receipt of the 3 cents acknowledged.

## Great Excitement in Wales about a Marvellous Cure.

### Living Six Years Without Going to Bed.

Mr. EYRE.—While spending a few days at the pleasant seaside town of Aberystwith, Cardiganshire, Wales, I heard related what seemed to me either a fabulous story or a marvellous cure. The story was that a poor sufferer who had not been able to lie down in bed for six long years, given up to die by all the Doctors, had been speedily cured by some Patent Medicine. It was related with the more implicit confidence from the circumstances, as was said, that the Vicar of Llanyrtyd was familiar with the facts, and could vouch for the truth of the report. Having a little curiosity to know how such stories grow, I called on the Vicar and the liberality while at the village of Llanyrtyd to call upon the Vicar, the Rev. T. Evans, and to enquire about this wonderful cure. Though a total stranger to him, both he and his wife most graciously entertained me in a half hour's conversation, principally touching the case of Mr. Pugh, in which they seemed to take a deep and sympathetic interest, having their families with his sufferings, and now rejoiced in what seemed to them a most remarkable cure. The Vicar remarked that he presumed his name had been connected with the report from his having mentioned the case to Mr. John Thomas, a chemist of Llanon. He said Mr. Pugh was formerly a resident of their parish, but was now living in the parish of Llanddeiniol. He strongly vouched Mr. Wm. Pugh's character as a respectable farmer and worthy of credit. I left the venerable Vicar with a livelier sense of the happy relation of a pastor and people, feeling that he was one who truly sympathized with all who are afflicted in mind, body, or estate.

On my return to Aberystwith, I was impressed with a desire to see Mr. Pugh, whose reputation stood so high. His farm is called Panton-Mawr, signifying "white stone," and is situated near the summit of a smooth round hill, overlooking a beautiful valley in which is situated the lovely ivymantled Church of Llanddeiniol. I found Mr. Pugh, apparently about 40 years old, of medium height, rather slight, with a pleasant and intelligent face. I told him I had heard of his great affliction and of his remarkable and almost miraculous relief, and that I had come to learn from his own lips, what there was of truth in the reports.

Mr. Pugh remarked that his neighbors had taken a kindly and sympathetic interest in his case for many years, but that their interest was more greatly awakened by a happy change in his condition. What you report as having heard abroad, said he, is substantially true, with one exception. I never understood that my case was ever given up as hopeless by any Physician. I have been treated by several Doctors hereabouts, as good as any in Wales, but unfortunately no prescription of theirs ever brought the desired relief.

Fifteen years ago, however, I first became conscious of a sour and deranged stomach and loss of appetite, which the Doctors told me was Dyspepsia. What food I could hold in my stomach seemed to do me no good and was often thrown up with painful retchings. This was followed after a time with a hoarseness and a raw soreness of the throat which the Doctors called bronchitis, and I was treated for that, but with little success. The cure consisted of breath and a sense of suffocation, especially nights, with clammy sweat, and I would have to get out of bed and sometimes open a door or window in winter weather to fill my lungs with the cold air.

About six years ago I became so bad that I could not sleep in bed, but had to take my quietest and dreamy sleep sitting in an armchair. My affliction seemed to be working downward into my bowels as well as upward into my lungs and throat. In the violent coughing spasms which grew more frequent, my abdomen would expand and collapse and at times it would seem that I should suffocate. All this time I was reduced in strength so that I could perform no hard labor and my spirits were consequently much depressed.

Early in this last spring I had a still more severe spasmodic attack, and my family and neighbors became alarmed, believing that certainly I could not survive, when a neighbor, who had some knowledge of the merits of the medicine, sent to Aberystwith by the driver of the Omnibus Post, some seven miles distant, and fetched a bottle of Mother Selgel's Curative Syrup. This medicine they administered to me according to the directions, when to their surprise and delight no less than my own, the spasms ceased. I became at once, and my stomach was calmed. My bowels were moved as by a gentle cathartic, and I felt a sense of quiet comfort all through such as I had not before realized in many years. I could walk around the house and breathe comfortably in a few hours after I had taken the medicine. I have continued to take the medicine daily now for something over two months, and I can lie down and sleep sweetly at nights and have not since had a recurrence of those terrible spasms and swellings. I have been so long broken down and reduced in my whole system that I have not tried to perform any very hard outdoor labor, deeming it best to be prudent and to avoid over-exertion. I may say self injury before my strength is fully restored. I feel that my stomach and bowels have been and are being thoroughly renovated and renewed by the medicine. In fact I feel like a new man.

I have been much congratulated by my neighbors, especially by the good Vicar of Llanyrtyd, who with his sympathetic wife have come three miles to shed tears of joy on my recovery. I had Mr. Pugh good-bye, happy that even one at least among thousands had found a remedy for an aggravating disease.
