Following the typhoon of 2 November, 3000 sheets of corrugated metal were distributed among the ten districts as well as the Chammorro community at Yaptown. U.S.C.C. surveyed 18,200 lbs. of rice which had been wet when its warehouse was wrecked. The rice, which could not be stored but thwich was still suitable for immediate consumption was similarly distributed, together with twelve cases of canned sausage meat and thirteen tents from CAU.

At the present time, 885 milk cansare in process of distribution. These receptacles are particularly desirable for food and water storage. A portion of the total has been reserved for shipment to the low islands during the forthcoming field trips.
