J. MOTT SMITH, Director of the Government Press. HONOLULU: WEDNESDAY, SEPT. 15, 1899.

BY AUTHORITY.

It is known to all whom it may concern, that Her Majesty, Queen Liliuokalani, having this day presented to this Department her commission, from His Excellency, Thomas G. ...

Given under my hand and the Seal of the Foreign Office, at Honolulu, this 7th day of September, A. D. 1899.

STANLEY H. PHILLIPS, Minister of Foreign Affairs.

It is known to all whom it may concern, that F. A. Schaefer, Esq., having this day presented to this Department his commission, from His Majesty the King of Italy, by the said F. A. Schaefer, Esq., in behalf of the said King of Italy, as Consul of the Kingdom of Italy, at Honolulu, Oahu, and all his official acts as such are authorized by His Majesty to receive full faith and credit by the authorities of His Government.

Given under my hand and the Seal of the Foreign Office, at Honolulu, this 7th day of September, A. D. 1899.

STANLEY H. PHILLIPS, Minister of Foreign Affairs.

Notice is hereby given that the Standards of Weights and Measures, have been received at the office of the Government of Hawaii, and that all weights and measures used in this Kingdom, shall conform to the said standards, according to law.

Contract is said to have signed, and even where his name is not mentioned in the document. -Gazette.

And forthwith you proceed to demonstrate that a contract has been made to be executed on a Chinaman, in cases where the laborer never saw the contract, by printing a contract with the said Chinaman, Chankha, which you say that Chankha never saw, and in which his name is not mentioned, -on the ground of maltreatment.

At the time of his complaint, he gave his name as Apo, and claimed to be the man who was bound in that paper; and upon due proof being made of the assault and battery, the man was not "bound" to service, but was discharged from service. You see you must bring on another instance. This will not stand.

Now the burden of our public discussions has been that all laborers or emigrants be encouraged to come hither voluntarily; that every contract be a voluntary one, or what is better still, that no contract be made abroad.

Read over that article again, and if you have leisure and patience, review all your articles from that of March 27th, -which it seems that you considered your masterpiece- and then, if you have further leisure, review those which precede it, and you will find that you have no views which anyone can "distort."

You are commencing "again" to go over the same weary round, and will, inevitably, land in the same bog. Now, what do you mean by the expression, that men should be encouraged to come here "voluntarily," and that every contract should be a "voluntary one?" Do you know of any man who has not come here "voluntarily?" Did anybody compel your friend, Chankha, -or Apo, or by whatever other name he may choose to be recognized- to go into the Emigration Office at Hong Kong, and recognize his contract? Did anyone compel him, in the said British settlement of Hong Kong, to go on board the emigrant ship?

Again: With reference to your remark that "no contract should be made abroad," how do you suppose that your laborers, who never saw \$50 in their lives, should get here? Who is going to pay their passages? Or do you propose to pay their passages, and then trust to the honor of several hundred men, devoid of property, to save it, and pay it out of their laborer's wages?

Now, you know that in your last two issues, you have held yourself out as a person learned and skilled in the law, undertaking to explain to your fellow citizens what is the law and practice in Admiralty courts; what is, or ought to be, the law and practice about holding or discharging a man held to answer on a process issued on the Admiralty side of the Court; what are inadequate damages, in a case of the evidence in which you never saw. Perhaps, therefore, you will likewise advise your fellow citizens as to whether your friend Chankha ever applied to a Court of competent jurisdiction for a discharge from his service, or ever left his employer, and was sought to be held to the contract before any Court; and whether or not such Court made any ruling in the premises, and if so, what that ruling was. If no such instance has taken place, perhaps you may advise your readers as to what you mean by the words "held to be binding," unless you perceive you are writing nonsense, and should conclude, wisely, to pass it over in silence. Don't say anything about a lawyerlike way of putting anything, -although, as we have said before, we regard that as complimentary. Yet you can not now claim any exemption from putting forth your statements in a clear, logical manner, -"admiralty," in a "lawyerlike" manner, since you held yourself out as a very pattern of lawyers, -a Judge of Judges.

Again: You say that your friend, Chankha, told Mr. Stanley, and Mr. Stanley told you, that his name was not Chankha. But Mr. Norcott says that Chankha told him that his name was Chankha, and that he took \$10 thereupon. Now, pray, if a man comes into your store -tells you that his name is William Jones -brings some of your books, or borrows your money, and gives his note as William Jones -will he, or ought he, in a suit for the amount of the note, be held not to owe it, because he, afterwards, tells you his name is not William Jones? According to your theory, it would be an easy way for a whole company of emigrants to get their passage, their advance, and their outfit, and then avoid the force of their obligation by changing their papers all round -or simply putting in a denial that they signed them. Your illustration of the man who came from England, got his traveling expenses, and then refused to give any equivalent for them because a lawyer told him that under the laws of this Kingdom he was free, is hardly in point. The instance, as you tell it, is not very creditable to the man, who ought to have been willing to render an equivalent for the money he received. But, it is bold among men who reason, that an instance, in order to be an illustration, must be similar in point. You are very vague in your recitation of the facts connected with the Englishman. You do not furnish his contract. Certain it is, that the law of the country is equally applicable to him as it is to a Chinaman. But this man's contract may have been different. He, possibly, did not bind himself to serve - A. B. & Co., their executors, administrators, or assigns, as according to the contract which you print, Chankha did. Possibly, he bound himself for a certain business, which, by the dissolution of the firm, was given up. The probability is, that it was not an assignable contract, in which case, the case are not parallel. But you

per forth your case with a delightful vagueness, which tends to show, as has been said above, that you have not - a view.

But further than that: Your friend, Chankha, complained against his employer, Mr. Stanley, in the Police Court for an assault and battery on him, on the 7th day of January, of this present year, and procured that he should be fined \$75, and then claimed to be discharged from this very contract - which you say is an instance of a man who has been held to service under a contract which he never saw, and in which his name is not mentioned, -on the ground of maltreatment.

At the time of his complaint, he gave his name as Apo, and claimed to be the man who was bound in that paper; and upon due proof being made of the assault and battery, the man was not "bound" to service, but was discharged from service. You see you must bring on another instance. This will not stand.

Now the burden of our public discussions has been that all laborers or emigrants be encouraged to come hither voluntarily; that every contract be a voluntary one, or what is better still, that no contract be made abroad.

Read over that article again, and if you have leisure and patience, review all your articles from that of March 27th, -which it seems that you considered your masterpiece- and then, if you have further leisure, review those which precede it, and you will find that you have no views which anyone can "distort."

He, possibly, did not bind himself to serve - A. B. & Co., their executors, administrators, or assigns, as according to the contract which you print, Chankha did. Possibly, he bound himself for a certain business, which, by the dissolution of the firm, was given up. The probability is, that it was not an assignable contract, in which case, the case are not parallel. But you

been intoxicated by a preparation from a small shrub or plant, resembling Indigo in appearance, and like cocaine induces in its effects, which had been thrown in the water by the natives, to facilitate the catching of the fish. What an ingenious mode of taking the fish darters! What would Isaac Walton say to such an ingenious violation of all the laws of angling? It is certainly base and cowardly, with no tincture of sport or amusement about it.

Our female Charva soon arrived as ever, the new taking the carriage and horses as well as two additional saddle horses - rather a full load for so small a vessel. There is a small native village, a church and school-house at Minolva, but it does not seem to be improving. It was formerly the residence of the Queen Sobora, sister of Kamehameha, whose great palace has passed away as well as the glory of Walaloa.

Crossing the rushing waters of the Kealia, I galloped up the long sloping ridge to the hospitable residence of E. Kroll, Esq., and had the pleasure of greeting and taking lunch with the hostess here on the Islands. Shortly after the Judge arrived with the Sheriff in charge. I left them snugly and comfortably unencumbered and reluctantly took myself away for a ride to Kilisnoa.

The evening star was descending toward the misty shroud of the central range as I descended the long slope toward Anahola, and gazed on the bold and marked promontory, shaped by the mountain ridge that breaks off sharp and abruptly toward the sea, above the village of Anahola. Bushes half obscured the opening in the angular basaltic ridge, and the sharp peaks were clothed with verdure to their summits. The recent rains had veiled their sharp outlines with a cloudlet that which I never witnessed before. I passed the scattered village of Anahola I crossed, crossed the bright mountain stream which here descends from its deep and narrow glen and where a diminutive delta rests its base on the sea. On the road along the edge of the valley I saw several dead orange trees and some live natives, who seemed to be being by the Panama order, as they were breaking in some wild, break-neck style.

I ascended out of the valley, on to a beautiful, elevated plain, that would make an excellent sugar plantation, and could be watered from the Anahola river. The mountain wall of the Anahola spur, bounded it on the left; the ocean on the right. Passing a stone wall, erected in times past by His Honor the Judge, I came on to a tract of land, known as school land, which had been sold by the Judge, to an association of natives, who had placed cattle upon it, built several comfortable frame houses, and were otherwise improving it, except in one particular - they were destroying the forest that clothed the mountain sides, and selling it for fire-wood. In looking at this tract of some four thousand acres, this divided among some hundred proprietors, I felt convinced that it would be decidedly advantageous to the prosperity of these islands, to divide the large sugarman in the same manner, among native and other proprietors. It would give them each a home - an interest in the soil, and stimulate them to industry, to make substantial improvements. It would make more independent subjects, and add to the general wealth of the country. Such associations should be encouraged, and the large tracts sold to actual settlers.

Passing by more dead forests, I stood on the high table land that overlooks Molokai valley. Here is a deep ditch and embankment of ancient appearance, the use of which I could not define. There is no tradition preserved of its use, and conjecture was baffled, and reluctantly gave up the point. Descending a zig-zag path, the stream was crossed, the saw-mill passed, that had been such an incubus on the property of Bertie-man, senior, and ascending the ridge on the opposite side, had the pleasure of greeting C. H. Bertleman, Esq., and congratulating him on the acquisition of his beautiful estate, who appeared beaming and radiant with smiles. Mr. Bertleman has a commanding position with a fine view of mountains and sea, extensive grazing lands and slaughter houses admirably arranged for the business. The district of country from this point to Kilisnoa is the most fertile and best situated in the island. The surface is gently undulating and diversified with woodland and date, while the soil is of the richest character. It gave evidence of former cultivation and population, as there were marks of old irrigation canals, and many orange, guava and bread-fruit trees, straggling neglected among the wild indigo and forest growth. In the neighborhood of the church there are some native dwellings and a few in the deep gullies, were in, a diminutive, a luxuriant vine-covered field on the left, that gave promise of several tons to the acre. The down into the deep glen of the Hea, with its rocky rushing waters, two patches, and so-called waterfalls, up the hill beyond, we ascended the high plain, out of which rises the ridge of Honouliuli. Away to the left extended the plain, seamed with deep gullies and scattered groves, with the low, wood-crowned volcanic ridge of Honouliuli, and beyond this, the green walls of the central mountain of Kaula, rising up grandly, till lost in the clouds. The highest peak of Honouliuli was in front of us, and on its summit, a tomb of rocks, that marked the resting place of one of the daughters of the land. I have often noticed the peculiarity of the natives in burying their dead in high places. It is a custom in common with the majority of the aboriginal tribes of North America. Is not this one of the links in the chain of proof of their affinity? Passing the point of the mountain, we rolled over the inclined plain towards the sea, and descended into a narrow plain, covered with the Ha tree, bounded seaward by a dyke of sand hills, on the west, by an abrupt mountain wall, where stood the dried trees of a former forest, in white and glistened gloom. This narrow valley, from the Hanalei river to the ridge near the Waialea crossing, would make one of the finest sea-level cotton plantations of the Islands. It is similar to the soil on James and Boardman Islands, in South Carolina, where the best sea-level cotton is produced, and could be easily irrigated from the Waialea river, by taking the water from above the lower fall. It is now pastured by worthless horses, and a few cattle and sheep, whose appearance is not at all creditable.

We arrived at the Waialea river, and while waiting for our stalwart, robust and heavy ferry-woman, of the Teutonic persuasion, to get her boat and gear in order, we passed along the sandy beach, where many bright silver-shells were apparently trying to reach the shore. We threw out signs of these with-out difficulty. We ascertained that they had

been intoxicated by a preparation from a small shrub or plant, resembling Indigo in appearance, and like cocaine induces in its effects, which had been thrown in the water by the natives, to facilitate the catching of the fish. What an ingenious mode of taking the fish darters! What would Isaac Walton say to such an ingenious violation of all the laws of angling? It is certainly base and cowardly, with no tincture of sport or amusement about it.

Our female Charva soon arrived as ever, the new taking the carriage and horses as well as two additional saddle horses - rather a full load for so small a vessel. There is a small native village, a church and school-house at Minolva, but it does not seem to be improving. It gave evidence of former cultivation and population, as there were marks of old irrigation canals, and many orange, guava and bread-fruit trees, straggling neglected among the wild indigo and forest growth. In the neighborhood of the church there are some native dwellings and a few in the deep gullies, were in, a diminutive, a luxuriant vine-covered field on the left, that gave promise of several tons to the acre. The down into the deep glen of the Hea, with its rocky rushing waters, two patches, and so-called waterfalls, up the hill beyond, we ascended the high plain, out of which rises the ridge of Honouliuli. Away to the left extended the plain, seamed with deep gullies and scattered groves, with the low, wood-crowned volcanic ridge of Honouliuli, and beyond this, the green walls of the central mountain of Kaula, rising up grandly, till lost in the clouds. The highest peak of Honouliuli was in front of us, and on its summit, a tomb of rocks, that marked the resting place of one of the daughters of the land. I have often noticed the peculiarity of the natives in burying their dead in high places. It is a custom in common with the majority of the aboriginal tribes of North America. Is not this one of the links in the chain of proof of their affinity? Passing the point of the mountain, we rolled over the inclined plain towards the sea, and descended into a narrow plain, covered with the Ha tree, bounded seaward by a dyke of sand hills, on the west, by an abrupt mountain wall, where stood the dried trees of a former forest, in white and glistened gloom. This narrow valley, from the Hanalei river to the ridge near the Waialea crossing, would make one of the finest sea-level cotton plantations of the Islands. It is similar to the soil on James and Boardman Islands, in South Carolina, where the best sea-level cotton is produced, and could be easily irrigated from the Waialea river, by taking the water from above the lower fall. It is now pastured by worthless horses, and a few cattle and sheep, whose appearance is not at all creditable.

We arrived at the Waialea river, and while waiting for our stalwart, robust and heavy ferry-woman, of the Teutonic persuasion, to get her boat and gear in order, we passed along the sandy beach, where many bright silver-shells were apparently trying to reach the shore. We threw out signs of these with-out difficulty. We ascertained that they had

been intoxicated by a preparation from a small shrub or plant, resembling Indigo in appearance, and like cocaine induces in its effects, which had been thrown in the water by the natives, to facilitate the catching of the fish. What an ingenious mode of taking the fish darters! What would Isaac Walton say to such an ingenious violation of all the laws of angling? It is certainly base and cowardly, with no tincture of sport or amusement about it.

Our female Charva soon arrived as ever, the new taking the carriage and horses as well as two additional saddle horses - rather a full load for so small a vessel. There is a small native village, a church and school-house at Minolva, but it does not seem to be improving. It was formerly the residence of the Queen Sobora, sister of Kamehameha, whose great palace has passed away as well as the glory of Walaloa.

Crossing the rushing waters of the Kealia, I galloped up the long sloping ridge to the hospitable residence of E. Kroll, Esq., and had the pleasure of greeting and taking lunch with the hostess here on the Islands. Shortly after the Judge arrived with the Sheriff in charge. I left them snugly and comfortably unencumbered and reluctantly took myself away for a ride to Kilisnoa.

DRUGS & MEDICINES.

R. R. R.

90 OUT OF 100

OF DEATHS, that annually occur, are caused by Preventable Diseases, and the greater portion of those complaints would, if Radway's Ready Relief or Pills, (as the case may require,) were administered when pain or uneasiness or slight sickness is experienced, be exterminated from the system in a few hours. PAIN, no matter from what cause, is almost instantly cured by the Ready Relief. In cases of Cholera, Diarrhoea, Cramps, Spasms, Bilious Colic, in all the Pains, Aches and Infirmities either in the Stomach, Bowels, Bladder, Kidneys, or the Joints, Muscles, Legs, Arms, Rheumatism, Neuralgia, Fever and Ague, Headache, Toothache, &c., will in a FEW MINUTES yield to the soothing influence of the Ready Relief.

Subtle Colds, Coughs, Influenza, Diphtheria, Hoarseness, Sore Throat, Croup, Fever and Ague, Malarial Fevers, Scarlet Fever, &c., &c., take from four to six of Radway's Pills, and also take a teaspoonful of the Ready Relief in a glass of warm water, sweetened with sugar or honey: bubble the throat, and chest with a soothing warm wash, and in Intermittent Fever, bathe the spine also, in the morning you will be cured.

How the Ready Relief Acts!

In a few minutes the patient will feel a slight tingling irritation, and the skin becomes reddened; if there is much disease in the stomach, the Relief will assist nature in removing the offending cause—a general warmth is felt throughout the entire body, and its diffusive stimulating properties rapidly course through every vein and tissue of the system, arousing the stolid and partially paralyzed glands and organs to renewed and healthy action, purifying the blood, and the surface of the body soft and increased heat. The sickness at stomach, colds, chills, head-ache, oppressed breathing, the sickness of the throat, and all pains, either internally or externally, rapidly subside, and the patient falls into a tranquil sleep, awakes refreshed, invigorated, cured.

It will be found that in using the Relief externally, either on the spine or across the kidneys, or over the stomach and bowels, that several days after a pleasing warmth will be felt, showing the length of time it continues its influence over the diseased parts.

RADWAY & CO.,

87 Maiden Lane, New York.

TYPHOID FEVER.

This disease is not only cured by Dr. Radway's Relief and Pills, but prevented. If exposed to it, put one teaspoonful of Relief in a tumbler of water. Drink this before going out in the morning, and several times during the day. Take one of Radway's Pills one hour before dinner, and one on going to bed.

If seized with Fever, take 4 or 6 of the Pills every six hours, until copious discharges from the bowels take place; also drink the Relief diluted with water, and bathe the entire surface of the body with Relief. Soon a powerful perspiration will take place, and you will feel a pleasant heat throughout the system. Keep on taking Relief repeatedly, every four hours, also the Pills. A cure will be sure to follow. The Relief strengthens, stimulates, soothes, and quiets; it is sure to break up the Fever and to neutralize the poison. Let this treatment be followed, and thousands will be saved. The same treatment in Fever and Ague, Yellow Fever, Ship Fever, Bilious Fever, will effect a cure in 24 hours. When the patient feels the Relief irritating or heating the skin, a cure is positive. In all cases where pain is felt the Relief should be used.

Relief 50 cts.; Pills 25 cts. Sold by all Druggists.

See Dr. Radway's Almanac for 1868

For Sale by Redington & Co., San Francisco, Crane & Brigham, San Francisco, R. H. McDonald & Co., San Francisco, Justin Gates & Bro., Sacramento, And by all Druggists and Country Merchants.

BOLLES & CO.

The Latest from the Stars.

Modern astronomy teaches that our sun is a star, and that the stars which we see appear larger than stars—appearances often deceptive. As we approach a body, the angle of vision upon it, so that it appears larger, as we recede from it, the angle closes, and it appears smaller; hence apparent magnitude is variable, and depends upon distance. Assuming our sun to be a star, the heat which we receive from it is diluted, and with this conception in mind, let us glance at the scale of its radiations. This is something stupendous. The amount of heat which we receive from the entire solar surface, calculated from the average quantity which it is proved we receive from him, would be sufficient to boil seven hundred thousand millions of cubic miles of ice-cold water each hour. Were a cylinder of ice, forty miles in diameter, projected into the sun, at the rate of 200,000 miles in length, each second, it would, with the speed of light—the heat which the sun radiates away would be sufficient to melt it as fast as it came, while the stellar surface would not be cooled one iota. Or the thermal energy which our central star pours out with the prodigality of the Infinite, we of the earth, although comparatively small, get only a paltry fraction—the twenty-three hundred millionths part—about enough to boil 200 cubic miles of ice-cold water each hour. The amount of heat which is shot outward as radiations impales into the profundities of space. Such is the office of our own star in the cosmical economy, but are there other stars which do the same thing? These little twinkling points—are they also all fountains of power which it would be well to know, and which the dynamic equilibrium of the universe through its mighty system of celestial exchanges?

Such has been the belief, countenanced by all analogical reasoning, that the sun is a hot body, and that the heat which it radiates is the cause of life. A Frenchman named Pouillet, a few years ago, undertook a series of researches designed to find out whether the sun is a source of heat, and whether the heat which it radiates is the cause of life. He did this by attempting to determine the amount of heat from a certain large portion of the heavens. We can not describe his delicate and ingenious processes, but he deduced from them that, when large tracts of the heavens are tested, a measurable and very considerable amount of heat is shown to be derived from them. His results indicated that the earth gets heat enough in a year from the whole vault of the sky to melt a shell one hundred and three feet annually. These conclusions were regarded as trustworthy by many, but the subject has attracted the attention of some of our scientific men, and they have thought the subject must be left open until new resources of experiment were brought upon it. Now we have had to wait long for the result, but it has at length found its man, and this splendid problem is solved. When, in the distant future, the histories of the arts and sciences are making up its chronological records of their early progress, let us write:

The Ship-canal across the Isthmus of Suez first opened, - - - 1869
American Continent first crossed by the Railroad, - - - 1869
Heat in the rays of a fixed star demonstrated by William Higgins, - - - 1869
The rays of a star, when made to fall upon the most delicate thermometer, produce no visible effect upon it; and the fact of the existence of heat in these rays could never have been known except through the employment of some far more sensitive instrument. Such an instrument has been grown up during the last few years by the combined efforts of the most skillful men of various countries, and has at length become a most accurate and perfect instrument. The principles of its action are as follows:

If we take some small bars of bismuth and antimony, and, joining them side by side in a certain order, solder them together, we shall form what is called a pile. If, now, one of the ends of this pile is warmed more than the other, an electric current begins to circulate round and round through the bars, and the greater the difference between the temperatures of the two ends, the stronger is the current. Such a current, when produced by heat, is called thermo-electric, and the system of metallic bars in which it is produced is therefore termed the thermo-electric pile. This is one part of our new instrument.

Everybody knows that the freely suspended magnetic needle points to the north; that is, places itself in the magnetic meridian. But if a needle so placed has a current of electricity passed round it, through wires parallel to its position when at rest, such a current tends to neutralize the magnetic action, and to throw the needle itself, that is, to make it point east and west. The distance to which the needle swings round out to the north and south, depends upon the strength of the electric current, and is measured by degrees of a circle. If the electric current is very slight, it may deflect the needle but a few degrees to the northward; if stronger, it may throw it 90°, or through a quarter of a circle, so that it will stand at right angles to its natural position.

Now let us see how this combination works as a heat-measurer. You hold your hand, say, a yard from the pile of a delicately constructed instrument. It radiates a stream of heat which falls upon one end of it, called its face; and that end is slightly warmed. This produces a current of electricity, which is carried through the wires and made to circulate round a needle. The needle starts out of its position, and comes to rest at some point on the scale; and the degree which it reaches becomes a measure of the amount of heat radiated from the hand.

It is this instrument which Mr. Higgins has employed in his researches into the heat of the stars. It was attached to his telescope, so that the image of a star formed by the eight-inch object-glass might fall upon the surface of the pile. So that the heat radiated, and so susceptible to the minute variations of temperature, that his apparatus often had to be left for hours, until it had come to equilibrium. It radiates a stream of heat which falls upon one end of it, called its face; and that end is slightly warmed. This produces a current of electricity, which is carried through the wires and made to circulate round a needle. The needle starts out of its position, and comes to rest at some point on the scale; and the degree which it reaches becomes a measure of the amount of heat radiated from the hand.

Such are the simple facts of this remarkable discovery; its deeper understanding can not fail to awaken emotions of the loftiest grandeur. What is heat as manifested in matter? A vibration of atoms. What is radiant heat? Undulatory movements propagated through an ethereal medium at the rate of 190,000 miles per second. Radiant heat falling upon matter raises its temperature; that is, the ethereal waves breaking upon the atoms increase their vibration. And thus it is that the stars of heaven radiate to the atoms of earth—the mightiest to the minutest, not by a material link, but through the mystery of motion, while that relation is one of delicate contact. Astronomical events are determined by celestial agencies. It was a vague prophecy of faith to be better known, and science has fulfilled it; it shows that the galaxies, the remotest space rule the inner changes of terrestrial matter, and time the march of its invisible molecules. Nor is this all. The forces in which matter is bound are brought together in so close and complex a web of correlation and interdependence, that the slightest disturbance of one is felt by all. The stellar impulse, so infinitesimal as never before to have been detected, shoots a thrill through a whole system of tensions, and releases itself in multiplied effects. Indeed, in the case we have been considering, the influence of the star is only seen at the end of a chain of transformations—in the overthrow of a series of balances in which our whole planet is implicated. Was it not that reality took place when Mr. Higgins exposed his instrument to the ray of the star Regulus, and showed that the heat which it radiates is the cause of life? That star is located so profoundly away in the abyss of space, that we can measure its distance only by the years which its radiations take to reach us. Astronomers tell us that the radiations, sent through the mighty void at the rate of 190,000 miles per second, would require twenty-six years to reach the earth.
