PREFACE

This issue of the University of Hawaii Bulletin comprises a general University bibliography for the four-year period, July 1, 1939, to June 30, 1943. It consists of three parts. Part I is a list of publications of the University. Part II is a bibliography of publications of faculty and staff members; in this are also included publications of staff members of the Pineapple Research Institute of Hawaii and of the Honolulu Fruitfly Laboratory of the United States Bureau of Entomology and Plant Quarantine, two independently-supported establishments located on the University campus and affiliated with the University. The individual lists in Part II are intended to include scientific and scholarly productions of faculty and staff members, and popular and informal articles in which the results of research are adapted to everyday problems and needs of the people of the Territory of Hawaii. Part III is a list of theses presented for advanced degrees at the University of Hawaii.

Attention is called to the fact that in Part I two series of publications (Agricultural Extension Circulars and Home Economics Circulars) have been listed in their entirety although part of them were published prior to July 1, 1939. The reason for this is that these series have not heretofore been included in the general University bibliography. It should be noted, however, that the number of these circulars credited to individual authors in Part II covers only those published within the last four years.

This bibliographical Bulletin was compiled by the University Publications Committee. Questions relating to the scope of the bibliography and the types of material to be included in the individual lists were discussed and decided by the Committee as a whole. The actual work of compilation was assigned to a sub-committee composed of Ralph S. Kuykendall and William B. Storey. The work was rendered difficult by the length of time covered and the unusual conditions caused by the war. An extraordinarily large number of faculty and staff members have left the University in the past two years, either permanently or on extended leaves of absence, and they are scattered in all parts of the world. Many letters were written to absent members and all reasonable diligence was exercised in collecting the data for Part II, but for the reasons suggested there are a few unavoidable omissions.

The material collected for the bibliography has required considerable editing, both for the sake of consistency in form and style and in order to supply missing data and, in a few cases, to correct errors. Although a conscientious effort has been made to secure accuracy, the Committee does not guarantee that the work is entirely free from errors.
